# 1 Overview

This document outlines the operation and functionality of the Signal Hound Spike<sup>™</sup> spectrum analyzer software. Spike<sup>™</sup> is compatible with Signal Hound's line of spectrum analyzers and tracking generators which include,

- SM series SM200A / SM200B / SM200C / SM435B / SM435C
- SP series SP145
- BB series BB60A / BB60C / BB60D
- SA series SA44 / SA44B / SA124A / SA124B
- TG series TG44 / TG124
  - A TG series device can only be interfaced when a compatible spectrum analyzer is connected in the Spike software.

This document will guide users through the setup and operation of the software. Users can use this document to learn what types of measurements the software is capable of, how to perform these measurements, and how to configure the software.

## 1.1 WHAT'S NEW

With Version 3.0, the software has been rebranded Spike. The software now supports all Signal Hound spectrum analyzers and tracking generators. Some older versions of the SA44 and SA124 require a firmware update to work with Spike.

# **1.2 SOFTWARE UPDATES**

The latest version of the Spike software is always available at <u>www.signalhound.com/Spike</u>. As of Spike Version 3.0.10, the software will also alert a user when a newer version of the software is available. This alert will appear in the status bar as well as on the Help->About Spike dialog. The software will provide a link to where the latest version can be downloaded.

# 2 Preparation

# 2.1 SYSTEM REQUIREMENTS

Supported Operating Systems\*

- Windows 11/10 64-bit
- Ubuntu 22.04/20.04/18.04 64-bit (SM, SP, and BB devices only)

Minimum System Requirements

- Processor requirements
  - o SM435B, SM200B/A, SP145, BB60D/C/A
    - Intel Desktop quad-core i5/i7/i9 processors, 4th generator or later\*\*.
  - o SM435C, SM200C
    - For 200MS/s I/Q streaming, 8<sup>th</sup> generation i7 or newer or i9 is recommended.
  - o SA44/SA124
    - Dual-core Intel processors.
- RAM requirements, the software will on average require less than 1GB of memory, certain configurations for the BB and SM products can consume several GB of memory.
  - o Recommended 8 GB
  - Minimum 4 GB
- Peripheral support
  - SM435B, SM200B/A, BB60D/C/A
    - USB 3.0
  - o SP145
    - USB 3.0 type C port with 10W power delivery.
    - Or, USB 3.0 using external power supply.
  - o SM435C, SM200C
    - 10GbE network connectivity through NIC via SFP+ connectors or through Thunderbolt 3 to SFP+ adapter. See network setup guide for more information.
  - o SA44/SA124
    - USB 2.0
- Graphics drivers
  - OpenGL 3.0 support

(\* We do not recommend running the Signal Hound products in a virtual machine, i.e. Parallels/VMWare/etc.)

(\*\* Our software is highly optimized for Intel CPUs. We recommend them exclusively. Xeon processors are not recommended)

# 2.2 SOFTWARE INSTALLATION (WINDOWS)

The software can be found on the CD included with your purchase or on our website at <u>www.SignalHound.com/Spike</u>. The most current version of the software is always on the website.

Once you have located the software, on Windows systems run the **Spike Installer(x64).msi** or the **Spike Installer(x86).msi** and follow the on-screen instructions. You must have administrative privilege to install the software. The installer will install the device drivers for the SM, SP, and BB series devices. The SA and TG series drivers must be installed separately and can be found at <u>www.signalhound.com/Spike</u>.

It is recommended to install the application folder in the default location.

**Note**: It is becoming more common for customers to need to enable the "High Performance" power plan in the *Control Panel -> Power Options* menu. If you are using a low power/ultra-portable PC or laptop, consider this step to ensure optimal performance. See <u>power management settings</u> for more information.

# 2.3 SOFTWARE INSTALLATION (LINUX)

Download the latest Linux Spike application at <u>www.signalhound.com/spike</u>. Follow the installation instructions found in the README file included in the download.

# 2.4 DRIVER INSTALLATION (WINDOWS)

The drivers for the SA series devices must be downloaded and installed separately. Visit the <u>www.signalhound.com/Spike</u> page to download the USB drivers. The installer must be run as administrator.

The drivers for the USB 3.0 devices are placed in the application folder during installation. The **\drivers\x86\** folder are for 32-bit systems and the **\drivers\x64\** folder for 64-bit systems. The drivers should install automatically during setup. If for some reason the drivers did not install correctly, you can manually install them in two ways by following the instructions below.

To manually install the USB 3.0 drivers, navigate to the application folder (where you installed the Spike software) and find the **Drivers64bit.exe** file. (If on a 32-bit system, find the Drivers32bit.exe file) Right click it and Run as administrator. The console output will tell you if the installation was successful.

If manually running the driver installers did not work, make sure the driver files are in their respective folders. You can also right click on the .inf file in the respective driver folder and select "Install".

If for some reason the drivers still did not install properly, contact Signal Hound.

# 2.5 DRIVER INSTALLATION (LINUX)

Signal Hound USB devices use the libusb driver on Linux. Please follow all installation instructions found in the README file in the Linux application download.

# 2.6 CONNECTING YOUR SIGNAL HOUND

With the software and device drivers installed, you are ready to connect your device. The supplied device USB cable should be connected to the PC first, then connected to the device. If your device supplies a Y-cable, ensure both USB ends are connected into the PC before connecting the device.

Once connected, you can verify the device has been properly recognized by the computer by looking in the device manager under the "Universal Serial Bus Controllers" tab.

Once connected, run Spike. The first time a device is run on a new PC, it may require additional initialization time.

If your device uses a 10GbE network connection, please see our separate network configuration manual for additional instructions.

# 2.7 RUNNING THE SOFTWARE FOR THE FIRST TIME

Once the software and drivers have been installed and the device is connected to the PC, you can launch the software. This can be done through the desktop shortcut or the *Spike.exe* file found in the installation directory. The default installation directory for Spike on Windows is C:\Program Files\Signal Hound\Spike. If a USB device is connected to the PC or an Ethernet device's network address has been saved when the software is launched, the software will attempt to open the device immediately.

If no USB device is connected to the PC and no Ethernet device's network address has been saved, the software will notify you. If multiple devices are found, a selection dialog will appear allowing you to choose which device to connect. Cancel to go into Idle mode.

Multiple Devices Found	$\times$
Please select a device to connect:	
SA44/124: 51810459 BB60C: 41500089	
SM200A: 18104276 SM435C #1: 192.168.2.10 SM435C #2: 192.168.2.11	
Connect Cancel	

#### Figure 1: Multiple Devices Found dialog

In Idle moce, a device can be opened using the **File > Connect Device** menu option.

If your Signal Hound device is connected to the PC and the Spike software still reports no devices found, see the <u>Troubleshooting</u> section for more information.

Note: If you see the IF overload message on program startup, please see this troubleshooting tip.

# 3 Getting Started

This section describes the UI in detail and how the UI can be used to control your Signal Hound spectrum analyzer.

Below is an image of the software on startup. If a device is connected when the application is launched, the software begins sweeping the full span of the device:

u Bar 🛛	📐 Spike: Signa	I Hound Spectrum Analyzer Software									- D - X

Figure 2 : Spike<sup>™</sup> UI after launch

# 3.1 THE MENU

### 3.1.1 File Menu

- Load User Preset Load a user selected preset. See <u>Presets</u> for more information.
- **Save User Preset** Save a user selected preset. See <u>Presets</u> for more information.
- **Print** Print the current view. Whether or not the control panels are included alongside graticule is chosen in Preferences > Screenshot Settings > Include Control Panels in Image.
- **Save as Image –** Save the current view as a PNG, JPG, or BMP image.
- **Quick Save Image** Capture the current view as a PNG image without specifying the file name or save location. The image files are named in increasing order and prefixed with *SpikeImage*. The save directory is the last directory used to save an image file. If an image file has never been saved, this defaults to *MyDocuments/SignalHound*.
- **Manage Correction Data** Bring up dialog to view and clear correction data files for your Signal Hound devices. See <u>Correction Data</u> for more information.

- **Connect Device** If no device is connected, this will attempt to discover all Signal Hound devices connected to the PC via USB and list the devices and their serial numbers. It will also list saved network devices by name. From this list, a single device can be selected.
- **Manage Ethernet Devices** Bring up dialog to add, edit, and remove name and addressing information for Signal Hound devices that connect via Ethernet, such as the SM200C and SM435C. See <u>Ethernet Devices</u> for more information.
- **Disconnect Device** This option disconnects the currently connected device. This option combined with "Connect Device" is useful for cycling a devices power or swapping devices without closing the Signal Hound software.
- **Exit** Disconnect the device and close the software.

## 3.1.2 Edit Menu

- **Restore Default Layout** After selecting this option, the software will restore its original layout the next time the application is launched.
- **Title** Enable or disable a custom title. The title appears above the graticule and is included in the screen captures via printing as well as session recordings.
- **Clear Title –** Remove the current title.
- **Hide Control Panels** Temporarily hides all visible control panels. Useful for presentations or for viewing on small resolution displays.
- Show Control Panels Shows any control panels that were previously hidden. If the mode changes or a preset is loaded, the software will automatically show any hidden control panels.
- **Theme** Select a color theme for the application. This sets every color in the Colors section of the Preferences dialog.
- **Preferences** Opens a configuration dialog allowing further configuration of the software.

### 3.1.3 Presets

Presets are an easy way to store and load measurement configurations. Each preset stores the full software configuration making it easy to switch between measurement configurations and pick back up where you left off.

Presets have the file extension 'ini' which is a Windows initialization file. The Spike software can store and load presets in three ways. In the file menu, the user can save and load explicit preset files by selecting the ini files directly. Alternatively, in the Presets menu, up to 9 presets are available for quick use. These presets are always available and can be quickly loaded with keyboard shortcuts. Finally, a power on preset can be saved from the Presets menu, which will automatically load when a device is connected.

Presets can only be loaded by the same type of device which was used when the preset was saved.

Presets accessed through the Preset menu are stored in C:\Users\YourUserName\AppData\Roaming\SignalHound\. AppData\ is a hidden folder by default on Windows systems. Each quick preset is stored in its own folder labeled "Preset [1-9]". The main file has the .ini extension and is named "Preset [1-9].ini". The power on preset is named "PowerOnPreset.ini". To

use a preset on a different computer, simply copy the preset folder to the new computer in the correct path.

The power on preset can be deleted from the Presets menu, or it can be manually deleted from the file system.

## 3.1.4 Settings

- **Reference** Change the source of the reference oscillator and whether a 10 MHz reference signal is emitted.
  - Internal or external reference can be chosen. If external reference is chosen, ensure a 10MHz reference is connected to the appropriate BNC or SMA input port.
  - For select devices, a reference output can be enabled.
  - Device Options
    - SM analyzers
      - **Use Internal Reference** Use the internal 10 MHz clock.
      - Use External Reference Use an external 10 MHz clock into the "10 MHz In" SMA port.
      - Internal Out Enabled Emit a 10 MHz reference signal from the "10 MHz Out" SMA port.
      - SP analyzers
        - **Use Internal Reference –** Use the internal 10MHz clock.
        - **Use External Reference** Use an external 10MHz reference clock. If one is not present and this selection is chosen, a large frequency offset will be present in the measurement.
      - BB60 analyzers
        - **Use Internal Reference** Use the internal 10 MHz clock.
        - Use External Reference (AC) Use an external 10 MHz AC/sin wave reference clock into the "10 MHz Ref In/Out" BNC port.
        - Use External Reference (DC) Use an external 10 MHz DC/CMOS-TTL input clock into the "10 MHz Ref In/Out" BNC port.
        - **Reference Out** Emit a 10 MHz reference signal from the "10 MHz Ref In/Out" BNC port. Internal corrections will not be applied since it is assumed that the incoming signal is from an instrument referenced to the BB60's own 10 MHz output.
      - SA124B
        - Not Set, Use Internal Reference Use the internal 10 MHz clock.
        - **Internal Reference Out** Emit a 10 MHz reference signal from from the "10 MHz Ref In/Out" BNC port.
        - Use External Reference Use an external 10 MHz clock into the "10 MHz Ref In/Out" BNC port.
      - SA44B
        - Not Set, Use Internal Reference Use the internal 10 MHz clock.
        - Internal Reference Out NOT USED.
        - **Use External Reference** Use an external 10 MHz clock into the "10 MHz Ref In" BNC port.

- **Reference Level Offset** Adjust the measurement amplitude to compensate for an attenuator, probe, or preamplifier. The offset is specified as a flat dB offset. This offset is then applied to the measurement. See <u>Using the Reference Level Offset</u> for more information.
- **Spur Reject –** See <u>Spur Rejection</u> for more information.
- **Enable Manual Gain/Atten** Enable the ability to change gain and attenuation. Signal Hound recommends keeping gain and attenuation set to automatic and controlling the sensitivity of the receiver through the reference level control.

### 3.1.5 Analysis Mode

This menu option allows you to switch between the main measurement modes in Spike.

- **Idle** Suspend operation.
- **Sweep** –See <u>Swept Analysis</u> for more information.
- **Real-Time**–See <u>Real Time Spectrum Analysis</u> for more information.
- Zero-Span –See Zero Span Analysis for more information.
- Harmonics See <u>Harmonic Analysis</u> for more information.
- **Scalar Network Analyzer –** See <u>Scalar Network Analysis</u> for more information.
- Phase Noise- See Phase Noise for more information.
- **Digital Modulation Analysis –** See <u>Digital Demodulation</u> for more information.
- **EMC Precompliance** See <u>EMC Precompliance</u> for more information.
- Analog Demod See <u>Analog Demod</u> for more information.
- **Interference Hunting –** See <u>Interference Hunting</u> for more information.
- **Spectrum Emission Mask** See <u>Spectrum Emission Mask</u> for more information.
- **Noise Figure** See <u>Noise Figure</u> for more information.
- **Bluetooth® Low Energy –** See <u>Bluetooth® Low Energy</u> for more information.
- WLAN See WLAN Modulation Analysis for more information.
- **LTE** See <u>LTE</u> for more information.
- **Mapping** See <u>Mapping</u> for more information.

### 3.1.6 Utilities

- **Path Loss Tables** See <u>Managing Loss Tables</u> for more information.
- Limit Lines See <u>Managing Limit Lines</u> for more information.
- Audio Player See <u>Audio Player</u> for more information.
- **Measuring Receiver** See <u>Using the Measuring Receiver Utility</u> for more information.
- **Frequency Difference Meter** See the <u>Frequency Difference Meter</u> for more information.
- **Timebase Adjustment** See <u>Adjusting Your Timebase</u> for more information.
- **Tracking Generator Controls** If a SA or BB series spectrum analyzer is the current active device in the software and a Signal Hound tracking generator is connected to the PC, selecting this utility introduces an additional control panel for controlling the tracking generator output manually. The tracking generator will only respond if the scalar network analysis mode is not active.

- **SA124 IF Output** Brings up a dialog box to control the IF downconverter for the SA124 spectrum analyzers. While the SA124 IF downconverter is active, the device cannot perform other tasks.
- **SM435 IF Output** Control the SM435 as an IF downconverter. The SM435 device must have the IF output option. The SM435 can function as a 24-43.5GHz to 1.5GHz downconverter, with 800MHz of bandwidth. While the device is functioning as a downconverter no other measurements can be performed.
- **Self-Test** Brings up a dialog box to manually self-test SA44B and SA124B devices. The dialog will explain the process of setting up the device for self-test and will display the results immediately after the test is performed.
- **BB60D UART Controls –** See <u>BB60D GPIO Controls</u> for more information.
- SP145 UART Controls See <u>SP145 GPIO Controls</u> for more information.
- SM GPIO Controls See <u>SM GPIO Controls</u> for more information.
- **Diagnostics** Brings up a dialog window with various temperature and power sensor measurements depending on device. Also, for devices that have active cooling, provides fan setpoint control.
- **Networked Speed Test –** See <u>Networked Speed Test</u> for more information.
- **GPS Control Panel –** See <u>GPS</u> for more information.
- **SM Network Configuration** See <u>SM Network Address Configuration</u> for more information.
- **I/Q Recorder** See <u>I/Q Recorder</u> for more information.
- **SCPI Log** See <u>SCPI Log</u> for more information.

### 3.1.7 Help

- **User Manual –** Open the Spike user manual in the system default PDF reader.
- **Signal Hound Website** Open <u>www.signalhound.com</u> in the system default web browser.
- **Support Forums** Open the signal hound support forum web page in the system default web browser.
- **About Spike** Display version and product information.

# 3.2 THE CONTROL PANELS

The control panels are a collection of interface elements for configuring the device and configuring the measurement utilities of the software. Each control panel can be moved to accommodate a user's preference. The panels may be stacked vertically, dropped on top of each other (tabbed), or placed side by side. This can be accomplished by dragging the panels via the control panel's title bar.

Different measurement modes will show different control panels. These controls are described in more detail in <u>Analysis Modes</u>.

# 3.3 THE TOOL BARS

The tool bar is located under the application menu. The toolbar is populated with commonly used functionality and view related controls for the current software configuration. All measurement modes share a set of controls while some measurements provide additional controls.

The shared functionality is described below.

- **Single** Request the software perform one more measurement before pausing.
- **Auto** Request that the software continuously perform measurements.
- **Recal** Recalibrate the device for any potential temperature drift. This button should be pressed any time the software presents the *Perform Cal* annunciator or when the user believes a recent change in temperature is affecting the measurement accuracy. Most measurement modes will auto recalibrate the device when a 2C temperature drift has been measured.
- **Preset** Restores the software and hardware to its initial power-on state by performing a device master reset.

# 3.4 PREFERENCES

The preferences menu can be found under *Edit Menu* ->*Preferences*. The preferences menu contains a collection of settings to further configure the Spike software.

- **Trace Width** Determines the overall width of the trace being drawn on the graticule.
- **Graticule Width** Determines the width of the lines that make up the graticule.
- **Graticule Dotted –** Set whether the non-border graticule lines are dotted or solid.
- **Display Line Width** Determines the width of the display line being drawn on the graticule.
- **Export Sweep Minimums** When this control is selected, the Export trace button will export a CSV of the form (frequency (Hz), min amplitude, max amplitude) instead of the normal form (frequency (Hz, max amplitude).
- **Export Scale** Select the frequency units to be used when exporting a trace.
- **Real Time Frame Rate** Set the update rate of the device and software when operating in real-time mode. Higher frame rates improve the resolution of events but also require higher PC performance. Can set values between 4 and 30 fps. This setting affects the SA and BB devices only.
- **Max Save File Size** Control the maximum size of a sweep recording. The software will stop recording when the max file size has been reached. For 32-bit machines, 1GB is the maximum possible file size. On 64-bit machines, the max file size can be set to 128GB.
- Include Control Panels in Image Toggles whether the control panels will appear along with the graticule in screenshot functions "Save as Image," "Quick Save Image," and "Print."
- Auto Reconnect Automatically attempt to reconnect device after a forced disconnect.
- **Auto Reconnect Timeout –** Duration of auto-reconnect attempt.

- Show No/Multiple Device Notifications Show modal alert on startup if there are either no devices connected or multiple devices connected. If there are no devices connected, then in order to run in demo mode this alert must be shown. If there are multiple devices, then Spike will start in Idle mode, and the user must select a device to connect with File > Connect.
- **Auto Recal** Automatically recalibrate the device when a 2C temperature drift has been measured.
- **Colors –** Control the color of various software features.
- **SCPI Enabled** When enabled, the Spike software will listen on the chosen IP port for an incoming connection. If this selection is changed, the software must be restarted to take effect.
- **IP Port** The port on which the Spike software listens for an incoming connection for SCPI control over TCP/IP.
- Lockout Dialog Enabled Show a modal alert dialog to indicate that Spike is being operated remotely via SCPI commands.
- Log Enabled Timestamp and save to a log all incoming and outgoing SCPI messages.
- Log Max Entries The maximum number of total entries in the log.
- Log Max Message Length The maximum number of characters that a SCPI message in the log may retain. Longer messages entering the log will be truncated to this length.
- Log FIFO Mode Drop the oldest messages when new messages are received or sent after the log max entries has been exceeded, otherwise new messages will not be logged.

### 3.4.1 Language Selection

The Spike software offers multiple language choices for most user-facing text and strings. The first time the software is launched on a PC, Spike will attempt to determine the best translation based on locale. Once loaded Spike will remember the last language used.

In the preference menu, a user can change the translation Spike uses. Simply select the language of choice and press "Apply". Once applied, the software will need to be restarted to take effect. On the next program launch, the selected language will be loaded.

# 3.5 THE STATUS BAR

The status bar runs across the bottom of the application. When the mouse enters the graticule the status bar displays the frequency/time value for the x-axis and the amplitude/frequency value for the y-axis. The status bar readings should not be used for precise measurements but is great for quick estimations.

The status bar also displays information about the current device connected if there is one. The type of device, temperature of the device, power supplied to the device, the device serial number and firmware version are displayed.

# **3.6 ANNUNCIATOR LIST**

Annunciators are warnings and indicators providing useful information to the operator. Annunciators are typically displayed in the upper left-hand corner of the graticule. Below is a list of all annunciators and their meanings.

- **IF overload** This indicator appears when hard compression is present on the displayed measurement. This annunciator will appear in the top center of the graticule and will trigger the UNCAL indicator. This occurs when the input RF signal reaches the maximum possible digital level. To fix this, decrease input signal amplitude, increase the reference level, increase attenuation, or lower gain.
- **USB/UDP** This indicator appears when data loss occurred over USB (for USB devices) or the network (for 10GbE devices). The data loss results in an incomplete or failed measurement. The software will continue to attempt to perform measurements in this scenario until a successful measurement can be performed. If you see this message regularly, this is an indication of potential PC problems, such as out of date drivers, faulty USB hardware, or over-taxed system.
- **Perform Cal** This indicator appears when the device has deviated more than 2 °C since its last temperature calibration. The software will automatically recalibrate the device in most measurement modes. For some measurement modes such as I/Q streaming, the user can determine when to recalibrate the device by pressing the *Recal* button on the user interface.
- **Low voltage** This indicator appears when the device is not receiving enough voltage from the USB 3.0 connection. The voltage value appears when this annunciator is present. The device requires 4.4V. If this annunciator appears, it may indicate other problems. Contact Signal Hound if you are unable to determine the source of this problem.
- **High temp** Specific to the SM series. When the FPGA internal temperature reaches 95C, this warning is shown. The software should be closed, and the device allowed to cool off.
- **Span limited by preselector** Specific to the SM series. When the preselector is enabled and the user configured span is limited by the bandwidth of the preselector filter, this warning is displayed.
- **PLT –** Indicates the path loss table is active.
- **RLO** Indicates the reference level offset is a non-zero value.
- **CPU Resources Exceeded** Indicates that the current measurement was unable to properly finish due to either inadequate CPU resources or due to an interruption of the system during the measurement. Many measurements for Signal Hound devices require minimum processing requirements to complete real-time tasks. If the processor is unable to keep up with the required processing, you will see this warning. The measurement data should be ignored.
- **Uncal** This indicator appears whenever any warning indicator is active to notify the user that the device may not be meeting published specifications. This is also indicated in scalar network analysis mode to denote that the store through calibration has not been performed.
- **Swept Real Time** Active when an SM series device is configured in real-time mode with a span greater than 160MHz.

# 4 Analysis Modes

The Spike software provides several analysis modes for your spectrum analyzer. Each mode and its measurement capabilities are described below. Note that not all modes are available for all Signal Hound spectrum analyzers.

# 4.1 SWEPT ANALYSIS

This mode of operation is the mode which is commonly associated with spectrum analyzers. Through the software you will configure the device and request the device perform a single sweep across your desired span. Spans larger than the devices instantaneous bandwidth is the result of acquiring multiple IF patches and concatenating the results of the FFT processing on each of these IFs.

The processing performed on each IF patch is determined by the settings provided. Each time a trace is returned, the device waits until the next trace request. For you, the software user, you can choose to continuously retrieve traces or manually request them one at a time with the **Single** and **Auto** buttons found on the Sweep Toolbar.

### 4.1.1 Sweep Settings Control Panel

The Sweep Settings control panel controls the sweep acquisition parameters for the device in standard swept-analysis and real-time modes.

#### 4.1.1.1 Frequency Controls

- **Center** Specify the center frequency of the sweep. If a change in center frequency causes the start or stop frequencies to fall outside the range of operation, the *span* will be reduced. Using the arrows changes the center frequency by *step* amount.
- **Span** Specify the frequency difference between the start and stop frequencies centered on the center frequency. A reduced span will be chosen if the new span causes the start or stop frequencies to fall outside the range of operation. Use the arrows to change the span using a 1/2/5/10 sequence.
- **Start/Stop** Specify the start and stop frequency of the device. Frequencies cannot be chosen that are outside the range of operation of the active device.
- **Step –** Specify the step size of the arrows on the center frequency control.
- **Full Span** This will change the start, stop, center, and span frequencies to select the largest span possible.
- **Zero Span** Enter Zero-Span mode using the current center frequency.

#### 4.1.1.2 Amplitude Controls

• **Ref Level** – Changing the reference level sets the power level of the top graticule line. The units selected will change which units are displayed throughout the entire system. When automatic gain and attenuation are set (default), measurements can be made up to the

reference level. Use the arrows to change the reference level by the amount specified by the Div setting.

- **Div** Specify the scale for the y-axis. It may be set to any positive value. The chosen value represents the vertical height of one square on the graticule.
  - In linear mode, the Div control is ignored, and the height of one square on the graticule is 1/10<sup>th</sup> of the reference level.
- **Atten** Sets the internal electronic attenuator. By default, the attenuation is set to automatic. It is recommended to set the attenuation to automatic so that the device can optimize fo dynamic range and compression.
- **Gain** Gain is used to control the input RF level. Higher gains increase RF levels. When gain is set to automatic, the best gain is chosen based on reference level, optimizing for dynamic range. Selecting a gain other than Auto may cause the signal to clip well below the reference level, and should be done by experienced Signal Hound users only.
- **Preamp** If the device connected has an internal preamplifier, this setting can be used to control its state.

#### 4.1.1.3 Bandwidth Controls

- **RBW Shape –** Select the RBW filter shape. See <u>RBW Filter Shape</u> for more information.
- **RBW** This controls the resolution bandwidth (RBW). For each span a range of RBWs may be used. The RBW controls the FFT size and signal processing, similar to selecting the IF band pass filters on an analog spectrum analyzer. The selectable bandwidths displayed change depending on the RBW Shape selected.
  - RBWs are available in a 1-3-10 sequence. (e.g. 1 kHz, 3 kHz, 10 kHz, 30 kHz, 100 kHz, ...) when using the arrow keys.
- **VBW** This controls the Video Bandwidth (VBW). After the signal has been passed through the RBW filter, it is converted to an amplitude. This amplitude is then filtered by the Video Bandwidth filter. When VBW is set equal to RBW, no VBW filtering is performed.
  - All RBW choices are available as Video Bandwidths, with the constraint that VBW must be less than or equal to RBW.
  - In Real-Time mode VBW is not selectable.
- **Auto RBW** Having auto selected will choose reasonable and fast RBWs relative to the span. When changing span, it is recommended to have this enabled along with Auto VBW.
- Auto VBW When enabled, VBW will equal RBW.

#### 4.1.1.4 Acquisition Controls

- Video Units In the system, unprocessed amplitude data may be represented as voltage, linear power, or logarithmic power. Select linear power for RMS power measurements. Logarithmic power is closest to a traditional spectrum analyzer in log scale.
- **Detector** The detector specifies how amplitudes in each bin are calculated. Each frequency bin in a sweep is the result of several FFTs depending on RBW/VBW/SwpTime. The results of the FFTs are then either averaged or min/maxed based on the choice of detector. Choose min/max to show the range between the min and max value. When min/max is selected, markers are placed on the max values. To place markers on the min values, select min detector.

- Sweep Time
  - For SA series devices, the sweep time value is ignored.
  - For BB and SM series devices, sweep time is used to suggest how long the spectrum analyzer should acquire data for the configured sweep. The actual sweep time may be significantly different from the time requested, depending on RBW, VBW, and span settings, as well as hardware limitations.
- **Sweep Interval** For all devices, the device will sweep at intervals of no more than the configured sweep interval. For example, a sweep interval will cause the device to sweep at most once per second.

## 4.1.2 Measurements Control Panel

The Measurements control panel allows the user to configure the spectrum related measurements. This control panel is visible while the software is in standard swept analysis and real-time operating modes.

#### 4.1.2.1 Trace Controls

The software offers up to six configurable traces. All six traces can be customized and controlled through the measurements control panel. When the software first launches only trace one is visible with a type of *Clear & Write.* 

- **Trace** Select a trace. The trace controls will populate with the new selected trace. All future actions will affect this trace.
- **Type –** The type control determines the behavior of the trace over a series of acquisitions.
  - **Off –** Disables the current trace.
  - **Clear & Write –** Continuously displays successive sweeps updating the trace fully for each sweep.
  - **Max Hold** For each sweep collected only the maximum trace points are retained and displayed.
  - **Min Hold** For each sweep collected only the minimum trace points are retained and displayed.
  - **Min/Max Hold** For each sweep collected, the minimum and maximum points are retained and displayed.
  - **Average –** Averages successive sweeps. The number of sweeps to average together is determined by the *Avg Count* setting.
- **Avg Count** Change how many sweeps are averaged together when a trace type of average is selected.
  - The current count of averaged sweeps is displayed on the line below when a trace type of average is selected.
- **Color** Change the color of the selected trace. The trace colors selected are saved when the software is closed and restored the next time the software is launched. They are also configurable in Preferences > Colors.
- **Copy To** Copies the contents of the currently selected trace to a different trace. The contents of the destination trace of overwritten. If the destination trace type is off the trace type is set to clear and write. The destination trace is set to, update=off, and display=on.

- **Update** If update is not checked, the selected trace remains visible but no longer updates itself for each device sweep.
- Hidden If checked, the selected trace will
- **Clear –** Reset the contents of the selected trace.
- **Export** Save the contents of the selected trace to a CSV file. A file name must be chosen before the file is saved. The CSV file stores (Frequency, Max Amplitude) pairs. Frequency is in Hz, Min/Max are in dBm/mV depending on whether logarithmic or linear units are selected.

#### 4.1.2.2 Marker Controls

The software allows for six configurable markers. All six markers are configurable through the measurements control panel.

- **Marker –** Select a marker. All marker actions taken will affect the current selected marker.
- **Type** Specify the marker measurement type. For normal and delta marker readings, select Normal; for noise measurements, select Noise; for channel power at marker, select Channel Power; for N dB band, select N dB.
- **Place On** Select which trace the selected marker will be placed on. If the trace selected here is not active when a marker is placed, the next active trace will be used.
- **Update** When Update is ON, the markers amplitude updates each sweep. When OFF, the markers amplitude does not update unless moved.
- **Active** Active determines whether the selected marker is visible. This is the main control for disabling a marker.
- **Pk Tracking** When enabled, the selected marker will be placed on the peak signal amplitude at each trace update.
- **Pk Threshold** Specify the minimum amplitude required for a signal to be considered as a peak for the peak left/right buttons.
- **Pk Excurs.** Specify how far the amplitude needs to fall around a peak to be considered a peak for the peak left/right buttons.
- **Ch Power Width** (*Only visible for Channel Power marker type*) Specify the bandwidth of the channel power measurement.
- **N dB Offset** (Only visible for N dB marker type) Specify the offset used to determine the N dB band.
- **Set Freq** Manually place the marker on the selected trace at the selected frequency. Enable the marker if it is currently disabled. The marker frequency will be rounded to the closest available frequency bin.
- **Peak Search** This will place the selected marker on the highest amplitude signal on the trace specified by *Place On*. If the selected trace is *Off*, then the first enabled trace is used.
- **Delta** places a reference marker where the marker currently resides. Once placed, measurements are made relative to the position of the reference point.
- **To Center Freq** changes the center frequency to the frequency location of the selected marker.
- **To Ref Level –** changes the reference level to the amplitude of the active marker.
- **Peak Left –** If the selected marker is active, move the marker to the next peak on the left.

- **Peak Right** If the selected marker is active, move the marker to the next peak on the right.
- **Min Peak** If the selected marker is active, move the marker to the lowest amplitude signal.
- **Next Peak** If the selected marker is active, move the marker to the next highest peak.
- **Disable All** Disables all markers.

For peak left/right/next, peaks are defined by a group of frequency bins 1 standard deviation above the mean amplitude of the sweep.

#### 4.1.2.3 Occupied Bandwidth

- **Enabled** When enabled, occupied bandwidth measurements will become active on the screen.
- **Target –** Select which trace the occupied power measurement is performed on.
- **% Power** Percent power allows the percentage of the integrated power of the occupied bandwidth measurement to be adjusted.

#### 4.1.2.4 Trace Math Controls

All controls related to the trace math capability in Spike. For more information see Trace Math.

- **Enabled** Turns on/off trace math.
- **Op1 –** Set the first trace math operand.
- **Op2** Set the second trace math operand.
- **Result –** Set the trace math result trace (destination).
- **Operation –** Select the trace math operation.
- **Offset –** Set the trace math offset. Only applies to certain operations.

#### 4.1.2.5 Display Line Controls

The display line is a configurable visual only reference line shown on the graticule for sweep and realtime modes. The line is always drawn at a single y-amplitude across the entire graticule regardless of plot scale.

- **Enabled** Turns on/off the display line.
- **Level** Set the y position of the display line.

## 4.1.3 Channel Power Control Panel

See <u>Channel Power</u> for more information about taking channel power measurements.

### 4.1.4 Intermodulation Distortion Control Panel

See <u>Intermodulation Distortion</u> for more information about taking intermodulation distortion measurements.

### 4.1.5 Sweep Recording Control Panel

See <u>Sweep Record and Playback</u> for more information about sweep recording.

### 4.1.6 Sweep Toolbar

The sweep controls are visible when the device is operating in the normal sweep and real-time measurement modes.

- Spectrogram Enables the spectrogram display. See Spectrogram.
- **Persistence** Enables/disables the persistence display. See <u>Persistence</u>.
- **Intensity** Controls the intensity of the persistence display.

### 4.1.7 Sweep Plot

The plot displayed in both sweep and real-time measurement mode has several of the same zoom capabilities of the plots throughout the application. See <u>Zoom and Axis Manipulation</u> for more information.

The sweep plot is returned to auto scale when the measurement configuration changes. This can be due to the user changing a measurement parameter or loading a preset.

### 4.1.8 Peak Table

The peak table is a feature, in addition to markers, which allow the user to measure the absolute and relative amplitudes and frequencies of several signals present in spectrum at once. The peak table is available in sweep and real-time measurement modes. The peak table displays up to 99 peaks sorted by frequency or amplitude, which exceed the user's peak threshold settings. The peak threshold and excursion settings operate similarly to the ones available for markers (see <u>Measurements Control Panel</u>).

Figure 3: Peak table measuring the harmonics of a 10MHz input CW signal.

# 4.2 REAL-TIME SPECTRUM ANALYSIS

All Signal Hound spectrum analyzers can operate as real-time spectrum analyzers. Real-time spectrum analysis can be performed by selecting *Analysis Mode -> Real Time* in the main file menu. When the device is in real-time analysis mode, the bandwidth is limited to the real-time bandwidth, which is different for each Signal Hound device.

Analyzing signals in real-time mode is critical for characterizing short duration spectral events, such as spurious emissions or for interference hunting. Real-time analysis is also great for monitoring spread spectrum signals and observing frequency hopping communications channels.

These types of applications are possible because real-time spectrum analysis guarantees 100% probability of intercept for signals of a specific duration. That duration is dependent on the Signal Hound spectrum analyzer and the resolution bandwidth. Any signal that exceeds that duration is guaranteed to be captured and displayed by the Spike software.

When in real-time mode, a special persistence display is shown. A screen shot of the software in real-time mode is shown below.

Figure 4: SA44B analyzing an FM radio station in real-time spectrum analysis mode. The persistence display is shown on the bottom half of the application and a 2-dimensional waterfall plot is shown on top.

The persistence display shows a three-dimensional view of the signal density in the given span, where the X and Y axis still show amplitude over frequency, while the color of the plot is the density of the spectrum at any given point. As the spectrum density increases at a given point, the color of the plot will change from blue to green to red. The Signal Hound spectrum analyzers can create these plots from thousands to over a million traces worth of data per second to create these complex displays (depends on RBW). The persistence display is the accumulation of roughly 2/3<sup>rd</sup> of a second of real-time data acquisition.

## 4.2.1 Control Panels

Real-time spectrum analysis shares controls panels with standard spectrum analysis. See <u>Swept Analysis</u> <u>Mode</u> for more information.

# 4.3 ZERO-SPAN ANALYSIS

Zero span analysis allows a user to view and analyze complex signals in the time domain. The application can demodulate AM, FM, and PM modulation schemes, and display the results through multiple configurable plots. A user can enter zero span mode by using the *Analysis Mode* drop down file menu, or by pressing the zero-span button on the *Sweep Settings* control panel. Below is an image of the software operating in Zero-Span mode.

Figure 5: Triggering and measuring a pulsed waveform in zero-span mode.

The control panel contains inputs for controlling the capture settings of the device as well as specifying trigger conditions for the zero span sweeps. Available triggers are video and external. Video triggers begin the sweep only after a signal exceeds the amplitude specified in the *Video Trigger* input. When external triggering is selected, acquisition occurs when a trigger is detected on the spectrum analyzer trigger input port.

The control panel also contains a section to define the measurement interval, a subset of the zero-span capture that will be visible for measurement in the various plots. The Time Overview plot shows the interval in relation to the whole capture and provides an interface to control the same parameters graphically.

Zero-Span mode has the capability to record and playback I/Q waveforms using the record and playback control panels. For an in-depth discussion of I/Q record and playback see *Zero-Span Recordings*.

The application window is split into multiple views and provides a control panel for controlling zero span acquisitions. Zero span mode currently offers ten unique plots.

## 4.3.1 Zero-Span Settings Control Panel

#### 4.3.1.1 Capture Settings

• **Input Pwr** – Expected input power of the signal. Input power controls the reference level and the gain and attenuation. It is suggested to keep gain and attenuation set to *Auto* so the software can best choose them based on the *Input Pwr*.

- **Center** Specifies the tuned center frequency of the capture, or in another way, the OHz frequency of the I/Q data capture.
- **Step** Controls how much the center frequency shifts when pressing the center frequency arrow keys or using the up/down arrow keys on your keyboard when the center frequency text is highlighted.
- **Decimation** Controls the overall decimation of the I/Q data capture. For example, a decimation of 2 divides the analyzer sample rate by 2. Increasing decimation rate increases the possible capture time of the software but decreases the time resolution of each capture.
- **Sample Rate** Displays the sample rate of the current visible I/Q data capture. This number is equal to the device sample rate divided by the decimation value.
- **IF BW** (Intermediate Frequency Bandwidth) Controls the bandwidth of the passband filter applied to the I/Q data stream. The bandwidth cannot exceed the Nyquist frequency of the I/Q data stream.
- **Auto IFBW** When set to Auto, the IF Bandwidth passes the entire bandwidth of the I/Q data capture.
- **Swp Time** (Sweep Time) Controls the length of the zero-span data capture. The length is relative to the sample rate selected by *decimation*. Sweep times are clamped when the resulting capture contains less than 20 samples, and at the upper end, when the resulting capture contains more than 65536 samples.

#### 4.3.1.2 Trigger Settings

- **Trigger Type** Select a trigger type for the data capture. Possible trigger types are immediate, video, external, and frequency mask trigger.
  - Immediate trigger causes an acquisition immediately.
  - Video trigger triggers an acquisition once the sample amplitude crosses the user specified trigger level.
  - External trigger triggers an acquisition when a signal event is detected on the external trigger input port on the spectrum analyzers. Not all Signal Hound spectrum analyzers have access to this trigger type.
  - Frequency mask trigger, see <u>Frequency Mask Triggering</u> for more information.
- **Trigger Edge** Select whether to trigger on a rising or falling edge. Applies to both external and video triggers.
- **Video Trigger** Select the amplitude for the video trigger to trigger on. This value is ignored if video triggering is not selected.
- **Trigger Position** When a video or external trigger is selected, trigger position determines what percentage of samples of the sweep are displayed before the trigger. For example, in a 100-point sweep with a 10% trigger position, the sweep will display the 10 points before the trigger occurrence, and the first 90 points after the trigger.
- **Edit FMT** Open the frequency mask trigger editor dialog. See <u>Frequency Mask Triggering</u> for more information.

#### 4.3.1.3 Measurement Interval Settings

The measurement interval settings menu in zero-span controls the measurement interval, or subset of the full capture, displayed by all the plots except Time Overview and Waterfall.

- **Auto Interval** When auto interval is enabled, the measurement interval is the entire capture.
- **Interval Offset –** The time into the capture for the measurement interval to start.
- Interval Length The length of the measurement interval.

#### 4.3.1.4 FFT Settings

The FFT settings menu in zero-span controls the FFT parameters for the spectrum and waterfall plots, and the waterfall's spectrum view.

- **RBW** The desired RBW for the spectrum plot. Lower RBWs increase the required FFT window length. If the FFT window length is not long enough to achieve the desired RBW, the spectrum window will show a warning and the user will need to either increase RBW or increase the FFT Window length or overall capture size to display the spectrum plot.
- **Auto Overlap** When auto overlap is enabled, an overlap percentage is chosen to produce the maximum number of FFTs up to Max FFTs.
- **Overlap % -** The percentage of overlap between FFTs.
- **Max FFTs** The maximum number of FFTs. Computation will stop when this number is reached, even if only a portion of the capture has been covered.
- **Step Length** The length of time from the start of one FFT to the start of the next.

## 4.3.2 Record / Playback I/Q Control Panels

See Zero-Span Recordings.

## 4.3.3 Frequency Mask Triggering

Frequency mask triggering (FMT) is available in zero-span measurement mode. FMT works by taking overlapping FFTs on the input I/Q data and checking each FFT result against a user defined frequency mask. When the FFT results exceed the user defined mask, the software triggers the acquisition starting at the beginning of the FFT that exceeded the mask. The FFT size is based on the current RBW with an overlap rate of 50%. The flat-top window is used for all spectrum processing in zero-span mode. The frequency mask can be configured using the FMT editor.

Figure 6: FMT editor

The editor mirrors the standard zero-span spectrum plot as a guide for mask building. Using the editor buttons, you can add or remove mask points, create a mask using the spectrum plot as a baseline, apply frequency and amplitude offsets, and import/export existing masks for future use. Additionally, each point in the mask can be dragged on the spectrum plot using the left mouse button for quick mask building. When finished editing, select OK on the dialog and the mask is updated. Note: The frequency mask is not updated with the new values until you have selected OK on the dialog.

### 4.3.4 Zero Span Toolbar

These controls are available in zero-span measurement mode.

- Add Measurement Add a new measurement plot to the view area.
- **Auto Fit** When Auto Fit is selected the visible views will be auto scaled to fit the available application space. Disabling Auto Fit allows a user to scale and move the views into a custom configuration without the software interfering.
- **Reset View –** Resets the view area to the default configuration.

### 4.3.5 Zero-Span Plots

All plots in zero-span follow the <u>basic plot</u> interface in Spike.

Figure 7: Time Overview plot with the measurement interval set to encompass the triggered pulse.

Shows and allows adjustment of the measurement interval in relation to the whole capture. The measurement interval is the portion of the capture that is displayed by every other plot, except for the Waterfall plot, which shows all computed FFTs across the capture.

The measurement interval is represented by the unshaded region. Adjust the interval by dragging it or dragging its start and end points.

4.3.5.2 AM vs Time

Figure 8: AM vs Time plot on triggered waveform.

Shows the AM waveform over time. Can choose between log (dBm) or linear (mV) y-axis units.

When triggering is enabled, a vertical gray bar appears at the trigger location.

When the spectrum acquisition settings are set to manual, a gray shaded region covers the FFT region selected.

You can export the I/Q values of the acquisition by right clicking and selecting *Export I/Q (.csv)* in the context menu.

#### 4.3.5.3 FM vs Time

Plots the waveform as frequency vs time.

#### 4.3.5.4 PM vs Time

Plots the waveform as phase vs time. Can choose between radians or degrees as the y-axis units.

#### 4.3.5.5 I/Q Vs Time

Plots the individual I and Q channels as amplitude in mV vs time.

#### 4.3.5.6 I/Q Polar Plot

Plots the I/Q values as mV on the cartesian plane. The plot scale is set to the selected reference level of the acquisition.

#### 4.3.5.7 Spectrum Plot

Figure 10: FM signal with max hold.

Shows the frequency spectrum of the part of the zero-span capture defined by the measurement interval. The plot shows the amplitude over frequency of the waveform signal.

Under FFT Settings in the control panel, RBW is selectable up to the maximum number of points in the sweep. A flattop window is used with zero-padding to achieve selected RBWs. The FFTs max-held to form this plot must all begin and end within the measurement interval. Thus, the interval must be at least the size of one FFT for the plot to have data. If the selected RBW is not able to be met with the measurement interval portion of the acquisition size, a warning message is shown with the length of time required to meet the RBW.
#### 4.3.5.8 CCDF Plot

Figure 11: Comparing synthetic noise signal to a Gaussian reference and ideal test signal.

The Complementary Cumulative Distribution Function (CCDF) plot shows how often the signal is above the average signal power. The x-axis of the plot runs from 0dB above the signal mean to a user selected reference level. The y-axis is the percentage of time the signal appears above a specific a given amplitude.

The plot can be configured to operate on a single I/Q capture or a series of I/Q captures, by selecting the capture mode. When the capture mode is set to continuous, the capture time control sets the continuous capture buffer size. New samples are shifted into this buffer and the oldest samples are shifted out.

A Gaussian reference curve can be plotted which represents the ideal Gaussian distribution. A user stored reference waveform can be stored by pressing the *Store Ref* button. This stores the active user trace in memory. The reference waveform is stored until the *Store Ref* button is pressed again.

#### 4.3.5.9 Waterfall Plot

Figure 12: Measuring deviation of FM signal using reference marker, with a spectrum view of peak.

Shows the frequency spectrum of the signal over time. When an FFT sweep is selected with the marker, it is shown in the Waterfall Spectrum View above. The Spectrum View can be enabled and disabled from Preferences in the context menu.

This plot is functionally the same as the <u>Spectogram</u>.

#### 4.3.5.10 Channel Power Plot

Figure 13: Measuring main and adjacent channels of an FM signal in Zero Span's Channel Power plot.

Configures and measures the channel power of a main channel and an optional adjacent channel, consisting of a lower and upper component.

The plot is created by averaging FFTs across the measurement interval and taking channel power measurements on the resulting spectrum. FFTs default to 50% overlap but spread out if required to keep the number of FFTs at the configured maximum within the measurement interval.

The configuration dialog is accessed through the context menu. Use it to set the main channel width, enable the adjacent channel and set its width and offset, set the maximum number of FFTs, and reset to the default configuration. Widths and offsets default to ¼ of the sample rate, with 100 max FFTs.

🗼 Channel Power Configura	?	×					
Channel Width	2.000000	MHz					
Adjacent Channel Enabled							
Adjacent Channel Offset	Adjacent Channel Offset						
Adjacent Channel Width	1.000000	MHz					
Maximum Number of FFTs		100					
Reset to Defaults							

Figure 14: Configuration dialog for the Zero Span Channel Power plot.

### 4.3.6 Zero-Span Recordings

WARNING! Zero-Span recording can consume a large amount of space on your hard drive in a short amount of time. Caution must be exercised, particularly if you are storing waveforms on your Windows disk drive. See *I/Q Capture: Precautions* for more information.

In Zero-Span mode, a user can save and playback a short duration I/Q waveform. Waveforms are recorded in a binary format, using an XML description file. The full file format is described below.

For long term I/Q recording see <u>I/Q Recorder</u>.

#### 4.3.6.1 Recording

I/Q captures are performed using the **Record I/Q** control panel in zero-span mode. This control panel allows you to change the capture settings of the I/Q data. The settings are described below.

- Save Directory The default directory for the I/Q waveform files to be stored.
- File Prefix Applies a file name prefix to all files saved. Useful for creating identifiable file names.
- Capture Size Specify the minimum capture length for a single file.
- Max Number of Files Specify the number of waveforms to record.

Acquisitions begin by pressing the *Start* button located on the **Record I/Q** control panel. If the trigger type is set to *No Trigger* acquisitions begin immediately. If either *External Trigger* or *Video Trigger* are selected, the software will wait until a trigger occurs before starting acquisition. When the number of files to save is greater than 1, and a trigger is active, each file will require a trigger to begin acquisition.

The Spike software plots do not update during acquisition, but several statistics show you the status of the acquisition and the current capacity remaining on the selected disk drive.

#### 4.3.6.2 Playback

A file recorded through the **Record I/Q** control panel can be viewed in the software using the **Playback I/Q** control panel.

Start waveform playback by pressing the *Open File* button and selecting the XML description file for the capture you are interested in viewing. Playback should begin immediately.

Playback IQ			
wannen and the second			1818-91-1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911 - 1911
	Step Size (Samples)		16
Playing	Playback Rate (ms)		64
9.07 %	Auto Loop	$\checkmark$	
Open File			
Record IQ Playback IQ			

Figure 15: Playback I/Q control panel interface during waveform playback.

Several tools exist for accelerating measurements during I/Q playback.

- The I/Q scroll bar provides a preview trace for the full I/Q capture and a selectable region to quickly scroll through the entire waveform capture.
- The step size control specifies the number of samples to advance each time the view is updated. The step size control is only applicable when no triggering is active.
- The playback rate controls the speed at which the Spike software is updated when loading waveforms from the I/Q file.
- The *Single/Auto* buttons can be used to step through the capture manually.
- Enabling *Video Trigger* will force the Spike software to search the capture for a trigger before updating the plots. If no trigger is found, the capture will stop at the end of the file.

# 4.3.6.3 Using the I/Q Playback Control Panel to Analyze a Recording in Spike

To begin playback, press the *Open File* button. This prompts you to select the XML file of the recording you wish to analyze. Only one file may be open at a time.

If Spike can open the file, you should see the playback scroll bar populated with the I/Q preview trace and the *Playing* message found below the scroll bar.

To play through a file normally, ensure the *Playing* message is displayed and the Auto button is pressed in the toolbar and *No Trigger* is selected. You should see the view window in the scroll bar slide to the right as the contents of the file are updated in the plots.

At any time, you can press the *Single* button in the toolbar to pause the playback and single step through the file.

You can also slide the view window within the scroll bar to quickly move anywhere in the file. By doing this you will cause the playback to be *Paused* and must press the Play button for the playback to continue.

To video trigger on the contents of the file, ensure your video trigger is properly configured, press the *Single* button on the tool bar, ensure the file is not currently paused by pressing the play button. Then pressing *Single* should align the next capture on the next video trigger found. If no trigger is found in the remaining contents of the file, the plot view moves to the end of the file.

For any mode of playback, the playback toolbar must display the *Playing* message or else the software will not update the waveform. If you see the *Playing* message and the software still is not updating the on-screen waveform, ensure you are currently not in single trigger mode.

Looking for a trigger within a very large file may cause the software to delay several seconds or more. Use the scrollbar to quickly navigate to the region of interest or capture smaller files to reduce this delay.

#### 4.3.6.4 I/Q File Format

Each I/Q capture is saved as two files, an XML description file, and I/Q data binary file.

The XML file contains the acquisition settings and scale factors necessary to reconstruct the original I/Q waveform. The XML elements are described below.

- DeviceType Product name of the analyzer used in the acquisition.
- SerialNumber Serial number of the device used in acquisition.
- DataType Should be *Complex Short* indicating the binary format of the binary I/Q file.
- ReferenceLevel The reference level, in dBm, set in the Spike software for the acquisition.
- SampleRate Sample rate in Hz, of the I/Q waveform acquisition.
- Decimation Power of two integer value representing the decimation rate of the I/Q waveform from the full sample rate of the analyzer. (40MS/s for the BB60C/D and 486111kS/s for the SA44/124)
- IFBandwidth Cutoff frequency of the I/Q bandpass filter.
- ScaleFactor Used to scale the I/Q data from full scale to mW.
- IQFileName Full file path of the I/Q binary file saved by the Spike software. If you move the waveform files into another directory on your system, you must update this value to reflect the new location of the binary file. If you do not, the Spike software will be unable to playback the requested waveform.
- EpochNanos Nanoseconds elapsed since January 1, 1970. Often referred to as Unix time, Unix epoch, or Unix timestamp. The timestamp references the first sample in the I/Q waveform acquisition.
- SampleCount Number of I/Q values stored in the I/Q binary file.
- PreviewTrace Values used to create the waveform trace on the I/Q playback scrollbar. The values are created using a max hold decimation algorithm on the full I/Q waveform capture.

The binary file contains *SampleCount* signed 16-bit I/Q values. The binary file has little-endian byte ordering. Samples are stored in sequential order as

I<sub>1</sub>, Q<sub>1</sub>, I<sub>2</sub>, Q<sub>2</sub> ... I<sub>n</sub>, Q<sub>n</sub>

The values are stored as full scale, ranging from -32768 to +32767 representing floating point values between -1.0 and 1.0. To recover the original values, perform the following steps.

- 1) Read in the binary file to signed 16-bit complex values.
- 2) Convert the full scale 16-bit I and Q integer values into floating point values in the range of -1.0 to +1.0.
- 3) Multiply each I and Q value by the inverse of the scale factor in the XML file.
- 4) The I/Q samples should now be scaled to mW, where  $I^2 + Q^2 = mW$ .

#### 4.3.6.5 Precautions

Precautions must be taken when performing I/Q captures to ensure your existing data does not become corrupted and your I/Q waveforms are captured without error. Below is a list of recommendations and precautions when using the I/Q record capabilities of the Spike software.

- Store waveforms to an external hard drive and not the operating system (OS) hard drive. If your OS hard drive approaches 100% capacity, you will run into issues which will prevent your OS from operating properly. If you absolutely must store I/Q waveforms on the same drive as your OS, keep 20% of the disk free. (Windows suggests 15%)
- 2) Calculate the expected capture size beforehand using this simple formula.

Size of Capture(Bytes) = SampleRate(S/s) \* CaptureTime(s) \* 4

For example, a 5 second capture with the BB60C at the full sample rate is

$$40MS/s * 5 * 4 = 800MB$$

3) Ensure your hard drive write speed exceeds the acquisition speed of the analyzer. For many sample rates on BB and SM series devices, standard hard drive write speeds will be insufficient to sustain long term captures. This will create gaps in the data which will affect the quality of your measurements. A simple calculation of the record speed is

Write Speed (Bytes per second) = Sample Rate \* 4

It is expected the hard drive write speed exceeds this value by a reasonable margin. For some of the highest BB and SM series sample rates, a combination of solid-state drives and/or RAID configuration will be necessary.

4) Ideally, an operator should be present at the software and monitoring the acquisition status. In the use case where you are capturing several triggered events over a extended time interval, consider performing test runs on known signals to ensure your acquisitions settings are correct before committing to a long acquisition process.

# 4.4 HARMONIC ANALYSIS

The harmonic measurement mode provides the ability to measure up to 10 harmonics of a specified carrier frequency. Each harmonic measurement consists of a sweep at the fundamental and all harmonic frequencies. The span, RBW, and VBW can be controlled. All harmonic sweeps are plotted

sequentially, and the amplitudes are reported as dBc. Total harmonic distortion is reported in the upper right-hand corner of the spectrum plot.

Figure 16: Carrier frequency at 1MHz and 9 harmonics.

### 4.4.1 Measurement Procedure

The first sweep is performed centered at the selected *Center Freq*. If peak tracking is enabled, the center frequency measured at is the frequency of the previously measured fundamental. The frequency and amplitude of the fundamental is measured. The amplitude is measured using either a peak search or channel power, depending on the *Meas Type* selection. When channel power is selected, the frequency is measured using the center of the 90% occupied bandwidth.

All subsequent harmonics are measured at multiples of the measured fundamental frequency. The amplitudes are measured in the same way and stored as dBc.

The spectrum plot and harmonic list are updated as the harmonic measurements are performed. Measuring and plotting all harmonics is considered a single measurement.

### 4.4.2 Harmonic Controls

- **Center Freq –** The center frequency of the fundamental measurement.
- **Step –** Controls the frequency step of the arrows on the *Center Freq* control.
- **Span** The measurement span used at each harmonic.
- **RBW –** The measurement RBW used at each harmonic.
- **VBW** The measurement VBW used at each harmonic.
- **Input Level** The maximum expected input level. It is recommended to set this value to 5 dB above the maximum expected input level.

- **Disp Ref** The displayed reference level of the spectrum plot.
- **Div** Vertical spectrum plot division height.
- **Harm Count** Number of harmonics to measure and plot.
- **Meas Type** Select the measurement type at each harmonic. When peak is selected, a peak search is performed to find the frequency and amplitude of each harmonic. When channel power is selected, a channel power measurement is used to find the amplitude and occupied bandwidth measurement is used to find the frequency of each harmonic.
- **Trace Type –** Select the trace behavior.
- **Pk Tracking** When enabled, the fundamental frequency is measured at the previously measured fundamental frequency. When any setting is changed, the tracking center frequency is reset to the selected *Center Freq*.

# 4.5 SCALAR NETWORK ANALYSIS

If a BB or SA-series spectrum analyzer and tracking generator are both connected to the PC, select Analysis Mode > Scalar Network Analysis in the file menu. Scalar network analysis is used to measure the insertion loss of a device such as a filter, attenuator, or amplifier across a range of frequencies. This mode, when used with a directional coupler, can also measure return loss.

Figure 17 The SA44B and TG44A sweeping a passive bandpass filter.

To learn more about scalar network analysis and how the Signal Hound devices perform this task, please refer to the Signal Hound Tracking Generator user manual.

Ensure the TG sync port on the tracking generator is connected to the Sync Out port on the SA series spectrum analyzer.

### 4.5.1 Scalar Network Analysis Control Panel

#### 4.5.1.1 Tracking Generator Settings

- **Sweep Type** Specify whether an active or passive device is being swept. This will affect the attenuation and gain used during the sweep. Failing to properly set this value may result in reduced dynamic range or IF overload.
- **Sweep Size** Specify a suggested sweep size. The final sweep size is affected by this suggestion as well as hardware limitations.
- **High Range** If high range is selected, the software will optimize the sweep for dynamic range when a 20dB pad store through is performed. Sweep speed will increase when unselected at a penalty of lower dynamic range.
- **Store Thru** Press this button to normalize the sweep on the next acquired sweep. This may be re-pressed in the event a poor normalization occurred.
- **Store 20dB Pad** Perform a normalization when a 20dB pad is inserted in the RF path. Should only be performed after a normal "Store Thru".

#### 4.5.1.2 Frequency Settings

- **Center** Specify the center frequency of the sweep. If a change in center frequency causes the start or stop frequencies to fall outside the range of operation, the *span* will be reduced. Using the arrows changes the center frequency by *step* amount.
- **Span** Specify the frequency difference between the start and stop frequencies centered on the center frequency. A reduced span will be chosen if the new span causes the start or stop frequencies to fall outside the range of operation. Use the arrows to change the span using a 1/2/5/10 sequence.
- **Start/Stop** Specify the start and stop frequency of the device. Frequencies cannot be chosen that are outside the range of operation of the active device.
- **Step –** Specify the step size of the arrows on the center frequency control.

#### 4.5.1.3 Amplitude Settings

- **Plot VSWR –** Plot the return loss as VSWR.
- **Ref Level** Specify the displayed reference level of the plot. Changing this value causes the display to update immediately and does not affect the calibration status of the measurement. Specified as dB or SWR depending on whether *Plot VSWR* is selected.
- **Div** Specify the vertical plot divisions. When plotting VSWR, the graticule ranges from 1.0 at the bottom of the plot, to 1.0 + 10 \* div at the top. When plotting on a log scale the graticule will range from *Ref Level* at the top of the plot and *Ref Level* 10\*div at the bottom of the plot.

### 4.5.2 Measurements Control Panel

See <u>Measurements Control Panel</u> in Swept Analysis mode.

### 4.5.3 Configuring Scalar Network Analyzer Sweeps

The controls for Frequency, Amplitude, and Tracking Generator are used to configure sweeps, as follows:

- Use the Frequency controls to configure the desired center frequency and span.
  - For most devices, a start frequency of >250 kHz and a span of >100 kHz is recommended. This maximizes dynamic range, sweep speed, and accuracy.
  - (SA44/SA124 only) For crystals or other very high Q circuits with a bandwidth of 50 Hz to 10 kHz, select a span of 100 kHz or less. A slower narrow-band mode will be automatically selected. In this mode, a 100-point sweep takes about 7 seconds, but the sweep updates at each point.
- Use the Amplitude controls to set the Reference Level, a good starting value is +10 dB.
- Using the Tracking Generator Controls:
  - Select the desired sweep size. A 100-point sweep is a good starting point.
  - If measuring an amplifier, select Active Device
  - Leave High Range checked unless faster sweeps are needed at the expense of dynamic range.
  - If accurate measurements are needed below -45 dB, use the default settings of Passive Device and High Range.

### 4.5.4 Performing Sweeps

Before accurate measurements can be made, the software must establish a baseline, something to call 0 dB insertion loss. In the Spike software, this is accomplished by clicking **Store Thru**.

- 1. Connect the tracking generator RF output to the spectrum analyzer RF input. This can be accomplished using the included SMA to SMA adapter, or anything else the user wants the software to establish as the 0-dB reference (e.g. the 0-dB setting on a step attenuator, or a 20dB attenuator in an amplifier test setup).
- 2. Click **Store Thru** and wait for the sweep to be completed. The sweep should be normalized at 0 dB when this process is completed. At this point, readings from 0-dB to approximately -45 dB are calibrated.
- 3. (Optional) If accurate measurements are needed below -45 dB, insert a fixed SMA attenuator, and then click **Store 20 dB Pad**. The actual attenuation value does not matter, but it must attenuate the signal from the TG by at least 16 dB and not more than 32 dB. This corrects for any offsets between the high range and low range sweeps, giving accurate measurements down to the noise floor.

4. Insert the device under test (DUT) between the tracking generator and the spectrum analyzer and take measurements. All traces and markers are accessible during the network analyzer sweeps.

Note: Changing the sweep settings (frequency, amplitude, etc.) will require repeating steps 1-4.

#### 4.5.4.1 Improving Accuracy

One shortcoming of the Signal Hound tracking generators is poor VSWR / return loss performance. However, this can be easily overcome by adding good 3 dB or 6 dB pads (fixed SMA attenuators) to the output of the tracking generator and / or the input of the spectrum analyzer. A good 6dB pad will improve return loss by nominally 12dB to >20dB and should enable accurate measurements. These may be included when sweeping the "thru," effectively nulling them out. This will decrease the overall dynamic range.

#### 4.5.4.2 Testing High Gain Amplifiers

When measuring an amplifier that will have a gain of 20 to 40 dB, the use of a 20-dB pad is required. Insert the 20dB pad before the *Store Thru* and leave the pad on either the SA or TG when connecting to the amplifier. For amplifiers with more than +20 dBm maximum output, the pad should go on the output of the amplifier. If an amplifier cannot safely handle -5 dBm, place the pad on the amplifier's input.

### 4.5.5 Measuring Return Loss

A **directional coupler** of appropriate frequency range (sold separately) may be used to make return loss measurements.

- Connect the tracking generator to the directional coupler's "OUT" port.
- Connect the spectrum analyzer to the directional couplers "COUPLED" port.
- Use the "IN" port as the test port. Leave it open (reflecting 100% of power).
- If a cable is used between the test port and the antenna, connect it to the IN port but leave the other end of the cable open.
- Click **Store Thru**. The sweep should be normalized to 0 dB.
- Connect the device under test (e.g., antenna) to the "IN" port or cable. Return loss will be plotted.

Once again, measurement accuracy will benefit from 3 to 6 dB pads on the Signal Hound devices prior to Store Thru. This method is not as accurate as using a precision vector network analyzer, but with a good directional coupler, accuracy within a few tenths of a dB is typical.

#### 4.5.5.1 Adjusting an Antenna

To adjust an antenna for a certain frequency, use the Return Loss setup, above. Lengthen, shorten, and tweak impedance matching elements until the desired return loss is achieved. Be aware that you will be radiating some RF during this process. It is your responsibility to understand and obey the laws regarding transmitting on those frequencies.

### 4.5.6 Levels Used in Sweeps

This section covers the amplitudes used by the tracking generator for the various sweep configurations available in the Scalar Network Analysis mode.

If *High Range* is disabled, the tracking generator sweeps the specified frequency range at -30dBm.

If *High Range* is enabled, the tracking generator sweeps at 2 levels, once at -30dBm, followed by another sweep at -10dBm. These two sweeps are used to generate a single measurement (sweep) in the Spike software.

If *Passive Device* is selected, the analyzer will expect the signal to be at or below the tracking generator output power (no amplification)

If Active Device is selected, the analyzer will allow up to 20dB of amplification.

If you exceed the analyzer's expected input level, the analyzer can be overdriven resulting in an invalid measurement.

If you need additional amplification, add an attenuator in the signal chain.

### 4.5.7 Manual Tracking Generator Sweeps

To test devices with bandwidths below 50 Hz (e.g., 60 Hz notch filter), or if more than 90 dB of dynamic range is needed, do not use Scalar Network Analysis mode. Instead, stay in Swept Analysis mode and use **Utilities→Tracking Generator Controls** to set the tracking generator to a CW frequency output. Use Peak Search and Delta to establish relative amplitude, then insert the DUT and manually tune the TG across a narrow range of frequencies. A TG output of -10 dBm combined with an RBW of 10 Hz should give around 130 dB of dynamic range for most frequencies. Care must be taken in cable and device placement to avoid crosstalk.

# 4.6 PHASE NOISE MEASUREMENTS

You can use the phase noise measurement mode to measure single side band (SSB) phase noise of an input RF signal. Phase noise can be measured using any single Signal Hound spectrum analyzer, or by using the PN400 phase noise test system. To learn more about making measurements with the PN400 phase noise test system, see the section on <u>cross-correlation</u>.

Figure 18: SM200B measuring the phase noise of a VCO at 8GHz.

### 4.6.1 Measurement Theory

This section describes phase noise measurements made with a single spectrum analyzer. For measurements made using the PN400 phase noise test system, see the section on cross-correlation.

The phase noise measurement requires a fixed CW input into the analyzer. If at any point the input signal is removed, the measurement updates will stop, and a warning will be displayed on the phase noise plot.

When configuring a new measurement, a coarse frequency estimate must be made. The coarse frequency estimate of the input signal can be measured automatically using the signal search function or manually entered in the carrier frequency setting. Once a coarse frequency estimate is made, a fine frequency and amplitude estimate is performed. This provides the measurement configuration for the phase noise measurement itself. A fine estimate is performed prior to every phase noise measurement to ensure optimal settings are always used in the event of signal drift.

The phase noise measurement is performed directly using an FFT approach. Either phase noise, AM noise, or the combination of both can be measured. The resulting sweep contains 100 points per decade. Each phase noise measurement result is used to update the user configured traces and trace measurements.

Figure 19: Measurement Flow Graph

## 4.6.2 Cross-Correlation

Using the PN400 adapter and 2 SM200/435 spectrum analyzers, Spike can perform cross-correlated phase noise measurements improving the sensitivity of the measurement by up to 35dB over the base SM phase noise performance.

Figure 20: Cross-Correlation Measurement at 3.7GHz Carrier Frequency

To enable cross-correlation, follow these steps,

- 1) Connect your equipment according to the diagram below. Optionally connect a shared 10MHz reference or 10MHz reference output from the DUT to the 10MHz reference input to the SM devices if external reference is desired.
- 2) In the phase noise measurement mode, connect to both the PN400 and second SM analyzer using the controls found in the configuration control panel.

- 3) (Optional) Configure the VCO supply and tuning voltages if measuring a VCO.
- 4) Enable cross-correlation.

Figure 21: Typical Cross-Correlation Setup Using the PN400 Adapter.

#### 4.6.2.1 Measurement Theory

This section covers cross-correlated phase noise measurements. For non-correlated phase noise measurements, see <u>Measurement Theory</u>.

Cross-correlation is a method which can improve the phase noise measurement performance of any single device by making a simultaneous measurement on a second device and using signal processing to achieve these performance gains. The more cross-correlations that can be performed, the better the noise floor improvement. Spike uses a direct FFT method, which results in the ability to perform more correlations at wider offsets. The number of correlations is displayed for each decade.

Cross-correlation improves performance by a factor of

#### 5 \* *Log*10(# *of correlations*)

Below is a table of expected performance improvements based on correlation count.

Correlation Count	Gain (dB)
10	5
100	10

Analysis Modes | Phase Noise Measurements

1,000	15
10,000	20
100,000	25
1,000,000	30
10,000,000	35

Below is the measurement flow graph. The main difference from non-correlated measurements is that once the maximum correlations have been achieved the measurements stop and the user must manually restart a correlated measurement. Any change to the measurement settings will automatically restart the measurement.

Figure 22: Cross-Correlation Measurement Flow Graph

The Spike software limits the number of correlations to for each offset. Once the maximum number of correlations have occurred at a given offset, processing for that offset stops, but will continue for the other offsets. Maximum correlations occur for wider offsets faster than close in offsets.

#### 4.6.2.2 Reference

For the best results, both SM analyzers should use the same reference clock. Below is a short description of the possible reference settings. This setting overrides the Spike reference setting in the Settings -> Reference menu.

- **Int Ref** Both devices use their internal 10MHz references. A configuration step attempts to get these clocks to match as closely as possible.
- **Ext Ref** Both devices use an external 10MHz reference. Preferably one that it shared with the DUT, or one that the DUT is providing directly.
- **RF Ref** The input RF frequency is used to discipline the 2 SM devices. When RF ref is selected, signal search is bypassed and the entered Signal Freq is used.

#### 4.6.2.3 Gain Indicator

The gain indicator is the gray region located below the trace when cross-correlation is enabled. It represents the ideal trace location if the full performance gain of cross-correlation was realized. As the number of correlations is increased, if the gain indicator improves significantly faster than the measured trace (or the measured trace no longer improves), it would indicate additional correlations are not providing additional benefit. It is up to the customer to determine how much separation between measurement trace and gain indicator must be present to feel confident in the resulting measurement.

Figure 23: The separation near "A" would indicate we are adequately measuring the DUT at this frequency offset. The lack of separation at "B" indicates either additional correlations are needed, or this measurement performance is out of range for this DUT (if we are already at max correlations).

#### 4.6.2.4 Measuring Near Cardinal Frequencies

Spurious signals can appear when measuring near or at 100MHz multiples while taking advantage of cross-correlated phase noise measurements. Using an external reference that is shared between the SM devices and DUT, or using RF Ref can reduce or remove these mixing spurs.

### 4.6.3 Phase Noise Control Panel

This control panel appears when the measurement mode has been changed to *Phase Noise*. These settings control the acquisitions parameters of the sweep, trace and marker outputs, and jitter measurement configuration.

#### 4.6.3.1 Frequency Settings

- **Signal Freq** When signal search is disabled, this value will be used for the coarse frequency estimate.
- **Peak Tracking** When enabled, small drifts in the signal frequency will be tracked during the fine estimation procedure.

- **Ampl Thresh** Specify the minimum detected carrier level needed to perform a phase noise measurement. If this threshold is not met, the software will continue to look for a valid carrier frequency.
- **Signal Search** When enabled, the input frequency of the signal is estimated using a wide band sweep between the search start and stop frequencies. This sweep can take significant time for slower Signal Hound spectrum analyzers, and manually entering the input frequency may be desired when known.
- **Search Start** Start frequency used for automatic signal search. Ignored if signal search is disabled.
- **Search Stop** Stop frequency used for automatic signal search. Ignored if signal search is disabled.

#### 4.6.3.2 Sweep Settings

When using the SA44/SA124, the start/stop offsets can drastically affect measurement speed. See the section on measurement speed for more information.

- **Meas Type** Selects between phase noise, amplitude noise, or both for what to measure and display.
- **Start Offset –** Select the first decade to be measured and plotted.
- **Stop Offset –** Select the last decade to be measured and plotted.

#### 4.6.3.3 View Settings

These settings control the vertical range of the phase noise plot. The total vertical range of the plot can be calculated as,

[Max, Min] = [DispRef, DispRef - Div \* NumDivs]

- **Disp Ref** Specify the displayed reference level as dBc/Hz.
- **Div** Specify the plot division height in dB.
- **Num Divs –** Specifies the number of vertical plot divisions.

#### 4.6.3.4 PN400

These settings are used to connect and control the PN400 accessory.

The limits are used to constrain the Vsupply and Vtune settings. When out of range voltages could damage the VCO, it is best practice to set the limits prior to settings the voltages to prevent accidental entries.

- **Connect** Used to connect to the PN400 over USB. An attempt to discover and connect the PN400 is made when entering phase noise measurements. It is only necessary to manually connect when the PN400 is connected to the PC via USB after phase noise measurements have started.
- **Load Defaults** Revert all voltage output values to their defaults.
- **Vsupply** Specify the supply voltage.

- Vsupply Limit Min Specifies the lower limit on the Vsupply setting.
- **Vsupply Limit Max** Specifies the upper limit on the Vsupply setting.
- **Vtune –** Specify the tuning voltage.
- Vtune Limit Min Specifies the lower limit on the Vtune setting.
- **Vtune Limit Max –** Specifies the upper limit on the Vtune setting.
- **Output Enabled** Enables the Vsupply and Vtune on the PN400 using the user entered Vsupply and Vtune values.

#### 4.6.3.5 Cross Correlation

- **Connect 2<sup>nd</sup> Analyzer** Used to connect to another SM device required for cross correlation measurements.
- **Status** Shows status of second SM device connection. Must be connected to enable cross correlation.
- **Enabled** Enables cross-correlated measurements. Requires second SM device and PN400 to be connected before enabling.
- **Reference** Select the timebase reference of the cross-correlated test system. This setting overrides any individual reference setting. See the cross-correlation section for more information.
- **XCorr Factor** Sets the number of cross-correlation processing steps to occur before the measurement stops. Each processing step represents a specific number of correlations per decade.
- **Gain Indicator** Enable/disable the gain indicator display on the plot.
- **Counts Visible** Enable/disable the display of the cross-correlation amounts per decade on the plot.

#### 4.6.3.6 Trace Settings

- **Trace** Select the active trace. All other trace settings apply to this active trace.
- **Type –** Select the active trace type.
  - **Off –** Trace disabled/not displayed.
  - **Normal –** Trace is overwritten with each new measurement.
  - **Averaging –** Up to "Avg Count" successive traces are averaged together. Averaging occurs in dBc/Hz units.
  - **Reference –** Trace does not update with each new measurement. Current trace is held.
  - **Max Hold –** A max hold detector is applied with each new measurement. The detector occurs for each frequency bin.
  - **Min Hold –** A min hold detector is applied at each frequency bin with each new measurement.
- **Avg Count** When trace averaging is enabled, set the number of traces that are averaged together to create the output trace.
- **Update –** Stops the update of this trace. Similar functionality to Reference trace.
- **Hide** Hides the display of the trace on the plot. Depending on settings, will continue to update while hidden.

- **Smoothing** When enabled applies a smoothing window to the trace. The window length is controlled by the smoothing aperture.
- **Smooth Aperture** Controls the window size for the smoothing window. Larger window sizes improve smoothing at the expense of accuracy.
- **Hide Spurs** When enabled a spur reject algorithm attempts to remove spurs from the trace.
- **Spur Threshold** Threshold determination for the spur rejection algorithm. The spur must rise this amount above neighboring bins to be considered a spur.
- **Offset** Applies a fixed dB offset to the measurement. All trace measurements, including smoothing, spur reject, markers, and jitter occur on the offset trace.
- **Move To** Move the current trace to the trace selected. That trace will then become a reference trace.
- **Export** Export the current trace to a CSV file.
- **Clear –** Clears any accumulated averaging or min/max held results.

#### 4.6.3.7 Marker Settings

- **Marker** Select the active marker. All other marker settings apply to the active marker.
- **Trace** Specify which trace the marker is placed on.
- Enabled Enable/disable the marker.
- **Delta Marker** Toggle the delta marker measurement. A reference marker is placed at the current marker position when the delta measurement is enabled.

#### 4.6.3.8 Jitter Settings

- **Enabled** When enabled, the integrated RMS jitter calculation is performed and displayed on the graticule.
- **Trace** Specify which trace the jitter measurement is performed on.
- **Meas Start** Specifies the start frequency of the integrated RMS jitter calculation.
- **Meas Stop** Specifies the stop frequency of the integrated RMS jitter calculation.

### 4.6.4 Vibration

Mechanical vibration can impact phase noise performance in oscillators. Vibration can negatively affect both the DUT and Signal Hound spectrum analyzers. Mechanical isolation might be necessary for sensitive measurements, especially from things like fans, keyboards, etc.

### 4.6.5 Measurement Speed (SA44/SA124 only)

Sweep speed is greatly affected by the start and stop frequency. The following configurations have the largest effect on sweep time.

- Start frequencies at 10Hz and 100Hz. This affects all devices and can add 10+ seconds to the sweep time.
- A stop frequency of 10MHz decreases sweep speed dramatically for the SA44/SA124 devices. This can add 25 seconds to the sweep time.

Any changes to the configuration will not be applied until after the current sweep is performed. Additionally, other actions such as changing the measurement mode or closing the software will not take place until the current sweep is finished.

# 4.7 DIGITAL DEMODULATION

In this mode, users can measure modulation quality such as EVM, magnitude, and phase error, and characterize impairments such as I/Q offset, amplitude droop, and group delay via equalization filters.

The Spike software allows the demodulation of PSK, QAM, ASK, FSK, and custom constellation patterns using several standard filter types.

### 4.7.1 Digital Demodulation Control Panel

#### 4.7.1.1 Demod Settings

- **Center Freq** Specify the carrier frequency of the modulated signal.
- **Freq Step –** Specify the step size applied when using the center frequency arrays.
- Input Power Specify the maximum expected input power of the input signal.
- Sample Rate Specify the symbol rate of the modulated input signal.
- **Result Len –** Specify the number of symbols in the measurement.
- **Modulation** Specify the modulation format of the input signal. See the symbol mappings for each of the supported schemes in the <u>Appendix: Constellation Mappings</u>.
- Edit Custom Mod Bring up the constellation editor. See <u>Custom Modulations</u>.
- **Source Filter** Specify the filtering to be performed by the demodulator. See <u>Selecting the</u> <u>Measurement Filter</u> for more information.
- **Filter Alpha** Specify the bandwidth coefficient of the measurement filter. See <u>Selecting the</u> <u>Measurement Filter</u> for more information.
- **Auto IF Bandwidth** Specify whether the software selects an IF bandwidth automatically based on configuration. If automatic bandwidth is selected, the bandwidth is chosen as 2 times the symbol rate.
- **IF Bandwidth** Specify the width of an IF bandwidth filter to be applied before demodulation. This filter is used to reject out of band interference or adjacent channels.
- **I/Q Inversion** Specify whether to swap I/Q channels before demodulation occurs.
- **Averaging –** When checked, measurement averaging occurs.
- **Average Count** Select the average count for the modulation quality metrics on the error summary panel.
- **Pts/Sym** Displays the samples per symbol or oversample rate. Not selectable.
- **I/Q Offset –** When enabled, removes the I/Q offset prior to the error calculations.
- **Ampl Droop** When enabled corrects any linear amplitude error prior to the error metric calculations.

4.7.1.2 Wide Carrier Estimation

See <u>Wide Carrier Estimation</u> for more information.

- **Enabled** Enables wide carrier estimation.
- **Range –** Sets the wide carrier estimation search window.

#### 4.7.1.3 Trigger Settings

These settings affect the trigger used to frame the result/search window.

- **Trigger Type –** Specify the trigger source.
- **Trigger Level** Specify the video trigger level. The measurements will occur once this amplitude threshold has been met.
- **Trig Delay** Specify the number of symbols to delay the measurement by after a video or external trigger.

#### 4.7.1.4 Sync Search

See <u>Sync Search</u> for more information.

- **Enabled** When enabled, pattern sync search occurs within the measurement results.
- **Pattern (Hex)** Specify the sync search pattern.
- **Pattern Length** Specify the number of symbols in the sync pattern. The pattern bits are specified in the *Pattern* entry. If the number of bits in the pattern entry are greater than the number of bits necessary to meet the length specified, then the least significant bits are used. If the pattern is shorter than the length specified, then the pattern is padded with zeros to reach the number of symbols specified.
- **Search Length** Specify the size of the search window in symbols. The pattern will be searched for within this window.
- **Offset** Number of symbols to offset the result window from the start of a successful sync search.

#### 4.7.1.5 Equalization

See <u>Equalization</u> for more information.

- **Enabled** Enables adaptive equalization.
- **Filter Len** The filter length in symbols.
- **Convergence** Adaptation rate of each adaptive step.
- Hold When enabled, stops adapt steps.
- **Reset Filter** Resets the filter kernel to the unit impulse response.

### 4.7.2 Digital Demodulation Toolbar

This toolbar provides several controls to help the user customize the view layout.

- Add Measurement This control allows a user to add to the view area one of many default data views.
- **Auto Fit** When Auto Fit is selected the visible views will be auto scaled to fit the available application space. Disabling Auto Fit allows a user to scale and move the views into a custom configuration without the software interfering.

• **Choose Setup –** Select from several default configurations.

### 4.7.3 Selecting the Measurement Filter

It is possible to specify a baseband filter to be applied to the received data. Specifying the correct filter is necessary to demodulate the system under test. Below is a table of the possible configurations that the software provides.

Selected Source Filter	Meas. Filter Used	Ref. Filter Used
Raised Cosine	None	Raised Cosine
Root Raised Cosine	Root Raised Cosine	Root Raised Cosine
Gaussian	None	Gaussian
Rectangular	None	Rectangular

A user must also select the filter bandwidth, sometimes referred to as the filter alpha. If the measurement filter is root raised cosine, then the filter alpha of the transmitter filter must be provided to produce accurate demodulation.

All filters used have an impulse length of 32 symbols.

When the rectangular filter is selected, the sidelobes generated by the rectangular filter on the reference waveform are filtered out. Only the main lobe is present in the reference waveform. A filter cutoff equal to the sample rate is used. Put another way, the bandwidth of the I/Q baseband reference waveform after this filter is applied is 2 times the sample rate.

### 4.7.4 Custom Modulations

Spike can demodulate custom constellations. These constellations can be configured in the constellation editor. The custom constellations must adhere to the following rules.

- The number of symbols must be a power of two.
- The constellation must be symmetric about a 180, 90, 45, or 22.5-degree angle.
- The constellation cannot have duplicate points.

Differential encoding is not customizable with the constellation editor, nor is any I or Q time offsets (i.e. OQPSK). Any currently configured custom modulation is stored in the user presets. If the custom modulation is not valid, the measurement defaults to QPSK.

#### 4.7.4.1 Constellation Editor

The constellation editor can be opened with the *Edit Custom Mod* button on the digital demodulation control panel.

I/Q values can be entered directly in the symbol table. The constellation plot shows the currently entered I/Q values. For loading a large constellation, it is recommended to load a formatted CSV file.

- Add Symbol Inserts a new symbol row at the end of the symbol table.
- **Remove Symbol** Removes the row of the currently selected cell. If no cell is selected, the last row is removed.
- Load Default I/Q Map Selects and populates the constellation table with a default selection
- **Define APSK Mod** Opens the APSK Editor
- Load Load a formatted CSV file containing a saved custom constellation.
- Save Save a formatted CSV file describing the custom constellation.
- **Clear Table –** Remove all symbols.
- **Accept** Verifies the constellation and if the constellation is valid, stores the constellation as the active custom modulation.

Figure 24: APSK32 in the constellation editor.

#### 4.7.4.2 APSK Editor

The APSK editor can be opened with the *Define APSK Mod* button in the Constellation Editor.

There are four parameters that are used to define each APSK ring. They can each be manually edited in the table found in the APSK editor.

• **Ring ID** – ID number where 0 is the inner most ring

- **# States** The number of symbols represented in this ring
- **R#/R0** The ratio of the radius of this ring to the inner most ring(R0)
- **Phase** The phase offset of the first state in this ring

Some of the addition controls for the APSK Editor are described below.

- Load Default I/Q Map Selects and populates the constellation table with a default selection
- Add Row Adds another ring to the table
- **Remove Row** Removes the last ring from the table
- Load Loads a previously APSK configuration
- **Save** Saves the current configuration to a csv
- **Accept** Validates that the total number of states is a power of 2, stores the data, and closes the window

60	APSK Editor					?	×
[	Ring ID	# States	R#/R0	Phase	32APSK		Ŧ
ľ	0	4	1.000000	0.785398	Add Ro	w	
	1	12	2.530000	0.261799	Bomovo	Dow	
	2	16	4.300000	0.000000	Remove	Row	
					Load		
					Save		
					Accep	ot	
L							

Figure 25F: APSK32 in the APSK editor.

### 4.7.5 Wide Carrier Estimation

When enabled, wide carrier estimation performs an additional search step over a custom frequency range. This allows for demodulation of signals with large carrier frequency error. This additional step is implemented as a sweep prior to demodulation using the user specified *range* as the sweep span. An occupied bandwidth measurement is performed, and the center frequency of the estimated occupied bandwidth is used as the new center frequency of the demodulation measurement. This step is performed prior to each demodulation measurement.

The range should be set to at least two times the maximum expected frequency error plus half the signal bandwidth.

$$Range = 2 * (CF_{error} + \frac{BW}{2})$$

### 4.7.6 Sync Search

When sync search is enabled, demodulation occurs over a duration of search length symbols (user selected). The sync pattern is then searched for within this search length. If the sync pattern is found, the position of the first symbol that matches the pattern is used to frame the measurement. An additional offset can be applied to this framing. See the diagram below.

Search length must be longer than measurement length. The measurement is not allowed to go beyond the search length. Ideally, search length would be much larger than the measurement length. If the offset adjusts the result outside the search window, the sync pattern is considered not found.

Sync search can be used in combination with triggering. When performing sync search on pulsed waveforms, ensure the search length does not exceed the pulse duration, as demodulation occurs over the entire search length. For example, if the pulse duration is 512 symbols, search length should be no more than 512 symbols, thus limiting your result length to less than 512.

If the search pattern occurs more than once in the search length, only the first occurrence is considered. If the search pattern is not found, "Pattern Not Found" will be displayed on the demod bits plot.

Figure 26: This diagram illustrates how sync search is performed and how the measurement is framed within the search length.

### 4.7.7 Equalization

Figure 27: Characterizing a QAM64 waveform over a heavily impaired channel using equalization.

Equalization is used to measure and correct for the amplitude and phase frequency response (group delay) over the measurement channel due to fading, multi-path, reflections, or system components such as filters, amplifiers, etc. This allows some linear effects/impairments to be removed from the system isolating non-linear errors.

Equalization is only available for PSK and QAM modulation formats.

The Spike software uses a complex adaptive LMS FIR filter to perform adaptive equalization. The adaptation step is performed on the measured and reference waveforms and the filter weights output from the adaptation step are applied to the I/Q data on the next measurement prior to symbol lock, carrier recovery, and demodulation.

Since equalization is performed blind (no training sequence), large EVM and bit errors may cause the equalization filter to have difficulty adapting and converging.

It is important to ensure the frequency error of your signal is a small percentage of the symbol rate. We recommend a 1% frequency error or less. Small equalization filters will be more resistant to frequency errors. We recommend tuning the analyzer to an ideal center frequency before running equalization.

When the filter is reset, the filter is initialized with the unit impulse response. Below is a list of conditions on which the equalization filter is reset.

- Program startup
- Leaving and entering the digital demodulation measurement mode.
- The measurement filter is changed.
- Symbol rate has changed.
- Equalizer filter length is changed.
- The reset filter button is pressed.

The filter length is calculated by the equation,

• Tap count = (User Selected Filter Length – 1) \* Pts/Sym + 1

The convergence factor selected by the user is scaled by a normalization factor of 1.0e-6. Larger convergence values allow the equalizer to adapt faster to the current channel conditions but is more susceptible to noise and may cause the filter to become unstable. Smaller convergence values cause the equalization filter to adapt more slowly to the channel but resist noise and other non-periodic fluctuations in the signal.

We recommend starting with values between 1-100 to converge quickly on the channel conditions and reducing the convergence factor as EVM improves.

If at any point the filter becomes unstable, it will no longer be applied to the measurement data and will wait for the user to reset the filter. You can see when a filter is unstable on the equalization plots.

The equalizer filter impulse, frequency response, and phase response can be viewed using the equalizer plots.

The equalizer filter impulse response can be exported in the context menu of the equalizer impulse response plot.

### 4.7.8 High Order QAM Signals

This section contains a few tips for making measurements with high order QAM modulations.

- The measurement length should be 2-4 times the modulation order. For example, when measuring 256QAM signals, use between 512-1024 symbols.
- Ensure there is adequate randomness in the symbols/data. Ideally, all symbol points will be hit in a measurement indicating a random bit sequence.
- Ensure the frequency error is small. Even a small center frequency error will cause invalid measurement results. User lower order modulations to measure and offset for frequency beforehand or use a common timebase where applicable.
- Measurements can take several seconds up to 1 minute for large captures with high order QAM. Once the measurement has started, it must finish before accepting new configuration changes. Where possible ensure all other settings are correct before selecting the high order QAM modulation.

### 4.7.9 Customizing the Display

Spike allows a user to add and organize the measurement displays. The displays can be added to the main view area by selecting the "Add View" combo box on the toolbar and selecting the measurement displays. If "Auto Fit" is enabled, the view is added to an organized grid of views. If Auto Fit is disabled, then the user can move and resize the view to their liking. The view organization is saved when the application is closed and restored on the next program invocation.

All plots in digital demodulation mode adhere to the basic plot interface in Spike.

#### 4.7.9.1 Error Summary

The Spike software provides an error summary read-out which displays modulation quality metrics such as error vector magnitude (EVM), phase error, magnitude error, and frequency error. These error values are used to measure signal characteristics and quality. Most error values are provided as a peak and RMS average value taken over a sample size chosen by the user. The error value is first averaged over the capture interval at each symbol, and then peak held and RMS averaged to generate the displayed

Figure 28: Visualization of the EVM, Magnitude and Phase Error Calculations values. For peak symbol error values over a single capture, see the Error vs Time plots.

Modulation quality metrics are described below.

**EVM** is a common way to measure the quality of a communication system. EVM is defined as the root mean square (RMS) of the error vectors. It is calculated in the Spike software as

$$\% EVM = \frac{\sqrt{\frac{1}{N}\sum_{0}^{n-1}(I_{error}^{2} + Q_{error}^{2})}}{Normalization \ Reference} * 100\%$$

Magnitude error is defined as

$$Magnitude \ Error[n] = \frac{|Mag_{reference}[n]| - |Mag_{measured}[n]|}{Normalization \ Reference}$$

for each symbol. The RMS average and peak are calculated using all magnitude measurement errors for the given capture window.

Phase Error is defined as

$$Phase \ Error[n] = \ Angle_{reference}[n] - \ Angle_{measured}[n]$$

FSK Error is defined as

$$FSK \ Error = \frac{RMS(FSK \ Error \ at \ each \ symbol)}{Deviation}$$

where the error at each symbol is

FSK Error at Symbol i = FSK Measured[i] - FSK Reference[i]

and deviation is the peak frequency deviation.

**Frequency Error** is defined as the difference between the reference carrier frequency and measured carrier frequency, where the reference frequency is the user supplied center frequency.

The Spike software uses a **normalization reference** of one. This is defined as the value of the maximum constellation magnitude. The Spike software forces the largest constellation magnitude to be one for each of the selectable modulations.

4.7.9.2 Constellation Diagram

Figure 29: Constellation Diagram for a QAM 16 Input Signal

The constellation diagram helps a user visualize the quality of the signal and identify signal impairments such as phase noise, amplitude imbalance, and quadrature error. The constellation plot displays the modulation states and transitions of the input signal in the complex plane.

#### 4.7.9.3 Symbol Table

The symbol table displays the demodulated bits of the input signal. The number of bits shown is equal to the symbol count selected times the number bits each symbol represents for the modulation type selected. The bits can be displayed in binary or hexadecimal format.

The symbol table will also display the trigger pattern and whether it was detected.

#### 4.7.9.4 Eye Diagram

Figure 30: Eye diagram for a Pi/4DQPSK signal

Spike allows the addition of an eye diagram display in modulation analysis mode. The eye diagram is used to visualize system performance characteristics, such as signal distortion, inter-symbol interference, signal-to-noise, and timing errors.

#### 4.7.9.5 Error vs Time

Spike provides several error-vs-time displays. These displays offer a symbol resolution view of the common quality metrics such as EVM, magnitude error, and phase error. Below is the EVM vs Time plot, displaying individual EVM error over all symbols in the configured capture.

Figure 31 : EVM vs Time plot

# 4.8 EMC PRECOMPLIANCE

Precompliance measurements are available for SM, SP, and BB series devices. Precompliance measurements are accessed through the *Analysis Mode -> EMC Precompliance* file menu selection.

Precompliance mode provides useful measurement functions for easily testing emission regulation requirements. These measurement capabilities include,

- Setting up to 10 log scaled sweep ranges with custom limits and sweep parameters.
- Path loss and antenna factor tables for calibrating your test setup.
- A spur table showing all spurs which break the user defined limits and thresholds.
- Quasi-peak, peak, and average detectors for testing signals of interest, shown the bar meter plot.
- Detector lists which store results for the bar meter detector graph.

These functions provide a usable workflow for making conducted and radiated emissions precompliance measurements on your product.

Each function is detailed further below.

Figure 32 : Radiated Emissions Precompliance Testing for the VSG25A

### 4.8.1 Pre-Compliance Control Panel

• **Disp Start** – The start frequency used when auto frequency display range is disabled. See *Auto Freq* below.

- **Disp Stop** The stop frequency used when auto frequency display range is disabled. See *Auto Freq* below.
- **Auto Freq** When auto freq is enabled, the trace display will show the full frequency range determined by all active EMI sweeps. When auto freq is disabled the trace display will only span the frequency range selected by the *Disp Start/Stop* controls. This can be used to selectively display a region of interest.
- **Disp Ref –** This is the reference level used for the trace display.
- **Max Input** Specify the maximum input signal to be received by the unit. This controls the sensitivity of the unit. This value will be used to all active sweep ranges. Select a value that is roughly 5dB higher than the largest expected input.
- **Div** Adjust the y-axis scale of the plot.
- **Trace Type** Select between a clear-and-write, max-hold, and average trace behavior. All ranges will follow this behavior.
- **Average Count** Specify the number of trace averages to occur when trace type is average. All ranges will use this value.
- **Export –** Export the current sweep to a CSV file.
- **Clear –** Clear the displayed sweep.
- **Set Marker –** Manually set the marker frequency.
- **Pk Threshold** Specify the minimum amplitude required for a signal to be considered as a peak for the peak left/right buttons.
- **Pk Excurs.** Specify how far the amplitude needs to fall around a peak to be considered a peak for the peak left/right buttons.
- **Peak Search** Set the marker to the frequency of the largest amplitude signal found.
- **Disable –** Hide the displayed marker.
- **To Ref** Set the reference level to the current marker amplitude.
- **To Meters** Set the bar meter frequency to the current marker frequency.
- **Peak Left –** Move marker to the next peak on the left.
- **Peak Right –** Move marker to the next peak on the right.
- **Freq –** Select the meter center frequency.
- **Bandwidth** Select the bandwidth used for the meter readings.
- **Meas Time –** Select the acquisition time to be used for the meter readings.
- **Start** Start meter detection. This will interrupt sweeps.
- **Stop** Stop meter detection. The software will resume sweeping.
- Clear Clear the current and peak meter readings.
- **To List –** Store the current meter readings to the meter list.

### 4.8.2 Range Table

		Enabled	Start Freq	Stop Freq	RBW Shape	RBW	VBW	Auto VBW	Video Units	Detector	Dwell Time (ms)	Threshold (dBuV)	Limit Start (dBuV)	Limit Stop (dBuV)	Selectivity (dB)	Trace Color

	11	Disabled *	150.000000 kHz	30.000000 MHz	CISPR *	9.000000 kHz	9.000000 kHz	Auto 👻	Power *	Peak *	1.000	40.000	60.000	60.000	6.000	

Figure 33: Range Table Control Panel

The range table allows you to customize up to ten sweep ranges. Each range can have its own frequency range, RBW, VBW, and test limits. Changes to the range table are reflected immediately in the software. The table can be saved to disk and imported later.

- **Load Default –** Load the default range table inputs.
- **Save Table –** Save the current table setup to a CSV file.
- **Load Table –** Load a previously save table setup. This overrides the current setup.
- **Enabled** Enable or disable the selected range. Enabling ranges are swept and shown on the sweep display.
- **Start Freq** Select the start frequency of the selected range.
- **Stop Freq –** Select the stop frequency of the selected range.
- **RBW Shape –** Select between the 6dB CISPR RBW (Gaussian) or Flattop 3dB RBW filter.
- **RBW –** Resolution Bandwidth.
- **VBW** Video Bandwidth.
- **Auto VBW** When enabled, tracks RBW. When disabled, VBW must be equal to or lower than RBW.
- Video Units Video processing unit type.
- **Detector –** Select between Peak and Average detectors.
- **Dwell Time** Select the duration the spectrum analyzer dwells at any given frequency. This is helpful for capturing a periodic event. It is recommended to have the peak detector enabled when increasing dwell time.
- **Threshold** Minimum signal level for a signal to be considered a spur. This value must be lower than the limit setting.
- **Limit Start** Set the limit at the start frequency at which a signal is considered to fail the test setup.
- **Limit Stop** Set the limit at the stop frequency at which a signal is considered to fail the test setup.
  - The limit is drawn between the limit start and stop values. If you desire a flat limit, set them equal. The limit line is interpolated on a logarithmic scale.
- **Selectivity** Determines how sensitive the spur detector is. Higher values increase the necessary separation needed for a signal to be considered a spur. Caution: low selectivity values may greatly increase the number of reported spurs.

### 4.8.3 Frequency Scan Display

Figure 34: Frequency Scan Display Showing Four Configured Sweep Ranges.

For precompliance measurements, the main display is the frequency scan display. This plot shows all configured sweep ranges on one plot. The frequency axis is logarithmically scaled.

The plot stretches from the minimum to maximum configured frequencies. It displays each sweep range along with visible red lines denoting the limits you entered and numbered spur markings. A single marker is available by clicking anywhere in the spectrum.

The visible sweep can be configured using the control panel, either as a max hold or normal trace. Configuring the sweep as max hold can assist in finding signals of interest, such as intermittent and short duration events.

### 4.8.4 Spur Table

Export Spur	Spur	Range	Freq	Amp (dBuV)	Limit (dBuV)	Margin (dB)
Table	2	1	12.855528 kHz	13.29	10.00	3.29
0.1.1.1.1.0	3	1	17.127989 kHz	10.92	10.00	0.92
To Meter	0	1	9.841918 kHz	8.51	10.00	-1.49
	4	1	21.400449 kHz	7.64	10.00	-2.36
Scan Spure	5	1	25.672910 kHz	6.46	10.00	-3.54
ocari opura	1	1	11.253356 kHz	2.89	10.00	-7.11
Failing Only	8	1	47.092432 kHz	1.35	10.00	-8.65
raining only	7	1	42.800898 kHz	0.55	10.00	-9.45
	6	1	29.983517 kHz	0.30	10.00	-9.7

Figure 35: Spur Table Sorted by Spur Amplitude
The spur table lists all signals above the minimum threshold set for each sweep range. The spur column value correlates to the numbered spur shown on the frequency scan display. Only the first 100 spurs will be shown. Spurs which violate the upper limits set in the range table will be highlighted red.

Once you have identified one or more spurs of interest, it is easy to begin measuring each frequency of interest. Using the *Single* button and pausing the sweeps will cause the spur table to stop updating. Then you can sort by frequency or amplitude and measure each frequency of interest independently using the *Selected Spur to Meter* button.

- **Export Spur Table** Export both the peak table and meter list to a CSV file.
- Selected Spur to Meter Move the currently selected spur frequency to the meter frequency input.
- Scan Spurs Take meter measurements at all spurs and add results to Meter Readings list.
- Failing Only Only measure failing spurs (spurs that exceed the limit) on Scan Spurs.
- **Spur –** The spur number. The spurs are ordered by frequency by default.
- **Range –** Signifies which configured range the peak is presently in.
- **Freq** The frequency of the spur.
- **Amp** The amplitude of the spur.
- **Limit –** The interpolated limit of the range in which the spur occurs.
- **Margin –** The difference between the amplitude and the limit (*Amp Limit*).

### 4.8.5 Bar Meters

The bar meters' display is the second measurement tool for precompliance testing. The bar meters show you three different detector readouts at a single center frequency.

The bar meter measurement is activated using the *Start* and *Stop* buttons found on the control panel. It is automatically started after clicking the *Selected Spur To Meter* button in the Peak Table panel. While these detector measurements are active, sweeps are no longer updating.

The frequency and bandwidth can be selected through the control panel, and there are several quick ways to populate the configuration for your signal of interest, such as the markers *To Meters* button which sets the detector frequency to the current marker value, and the *Selected Spur to Meter* button, which moves the frequency for the currently selected spur in the spur table to the meter settings.

The bar meters show the output of up to 4 detectors. The peak and quasi-peak detectors are always shown, and the average detector can be set to RMS or linear average.

A red limit line is shown at the meter frequency, interpolated from Limit Start and Limit Stop in the Range Table.

The meter's update at the rate set by *Meas Time* on the meter settings control panel.

The meter's store and display the max held detector values read since the last time the *Clear* button was pressed. Pressing the *To List* button stores the current peak detector values to the meter list.

## 4.8.6 Meter List

Neter Readings										
Export Meter	Γ	Frequency	RBW (6dB)	Peak (dBuV)	Quasi-Pk (dBuV)	Avg Lin (dBuV)	Avg RMS (dBuV)	Limit (dBuV)	Date/Time	Comments
Readings	1	171.362305 kHz	9.000000 kHz	24.49	11.09	18.06	18.73	16.34	Thu Mar 25 10:	
Delete Selected	2	204.931641 kHz	9.000000 kHz	23.15	9.43	17.97	18.30	16.34	Thu Mar 25 10:	
Clear List	3	238.500977 kHz	9.000000 kHz	32.61	18.00	25.96	26.47	16.34	Thu Mar 25 10:	
Clear List	4	272.070312 kHz	9.000000 kHz	22.30	8.49	14.96	15.77	16.34	Thu Mar 25 10:	
	5	305.639648 kHz	9.000000 kHz	19.16	5.40	11.03	12.18	16.34	Thu Mar 25 10:	
	6	327.001953 kHz	9.000000 kHz	23.40	9.70	16.87	17.44	16.34	Thu Mar 25 10:	
	7	372.778320 kHz	9.000000 kHz	19.54	5.24	10.55	12.02	16.34	Thu Mar 25 10:	

Figure 37: Meter Reading Results

The meter list is generated by taking detector measurements at various frequencies and saving them with the *To List* button, or by clicking *Scan All* in the Peak Table panel. This list can be exported into a CSV file.

- **Export Meter Readings** Export meter readings to a CSV file.
- **Delete Selected –** Remove the selected meter reading(s).
- **Clear List –** Remove all readings from the list.
- **Frequency** The frequency that the meter reading was performed at.
- **RBW –** The resolutions bandwidth of the measurement.
- **Peak/Quasi Pk/Avg –** The detector results of the measurement.
- Limit The interpolated limit of the range in which the spur occurs.
- **Date/Time –** Timestamp of the reading.
- **Comments –** Entry field for notes about the reading.

### 4.8.7 Report Panel

Report			
	Report Number	0123AX	
Generate Report	DUT Name	VSG254	
	DUT Info	SIN 51520021	
Clear Info	Date of Test	3/25/2021	~
	Test Engineer	Jay Insiee	
	Notes	Another great test.	
			_

Figure 38: PDF Report configuration and generation.

The report panel enables the generation of a formal PDF report of the results of the precompliance testing. The report contains all the readings in the Meter Readings list, in tabular form, a snapshot of the sweeps plot, the metadata as entered (report number, DUT product name, DUT product info, date of test, test engineer, and notes), and a full description of the spectrum analyzer used under test equipment, including the manufacturer, model number, serial number, and firmware version.

- **Generate Report –** Generate and save the PDF report to chosen location.
- Clear Info Clear metadata entry fields.
- **Report Number –** Identifying number for report.
- **DUT Name –** Name of product under test.
- **DUT Info –** Additional description of product under test (eg. serial number).
- **Date of Test –** Date the readings were carried out.
- **Test Engineer –** Engineer responsible for test.
- **Notes –** Additional information.

### 4.8.8 Quasi-Peak Measurements

Quasi-peak (QP) measurements are available through the bar meters display. QP measurements begin when pressing the *Start* button on the precompliance settings control panel.

The QP detector in Spike is defined by the CISPR 16.1 and ANSI C63.2 standards. The characteristics are shown below.

Frequency Range	Charge Time Constant	Discharge
		Time Constant
9 - 150 kHz	45 ms	500 ms

150kHz - 30 MHz	1 ms	160 ms
30 MHz - 1 GHz	1 ms	550 ms

The charge time is defined as the time needed after the instantaneous application of a constant RF sinewave voltage at the instrument input, for the output voltage to reach 63% of its final value.<sup>1</sup> The discharge time constant is the time needed, after the instantaneous removal of a constant sinewave voltage applied to the input of the instrument, for the output voltage to fall to 37% of its initial value.<sup>1</sup>

The QP detector is realized in the Spike software with digital filters.

#### 4.8.8.1 Damped Output

The output of the QP detector is simulated as a critically damped meter with time constant of 160ms for 9 kHz – 30 MHz and 550ms for 30 MHz – 1 GHz.

This meter output is realized in the Spike software with digital filters.

# 4.9 ANALOG DEMODULATION

The Spike software can perform analog modulation analysis on AM and FM modulated signals. This mode provides several plots and measurements for analog modulation analysis. Analog modulation measurements are available through the *Analysis Mode->Analog Demod* file menu.

This mode provides 5 views for the AM and FM time and frequency domain. All plots in analog demodulation mode adhere to the <u>basic plot</u> interface in Spike.

- **AM Time Domain** plot shows the amplitude modulation over time in the units specified by the *Input Level* settings.
- **AM Spectrum** plot displays the frequency spectrum of the AM waveform. The y-axis shows the AM depth% on a logarithmic scale, using 100% depth as the reference.
- **FM Time Domain** plots shows the FM demodulated signal over time with a selectable frequency reference level.
- **FM Spectrum** displays the frequency spectrum of the FM waveform. The y-axis is frequency deviation in Hz, with the reference level reference level equal to the device sample rate.
- **Analysis Summary** displays the modulation measurement results for the AM and FM waveforms.

Configuring the software to perform measurements involves selecting the input signal power level, carrier frequency and low pass filter using the controls found on the right-hand side control panel. The low pass filter is applied to the demodulated signal before modulation analysis is performed. Changes to the settings are reflected immediately in the acquisition.

Figure 39: Viewing a broadcast FM signal and observing the 19kHz FM pilot tone in analog demodulation mode.

The analog demodulation mode performs a number of basic measurements on an audio signal such as:

- **Carrier Frequency** records the carrier frequency.
- **Carrier Error** records the difference between the measured carrier frequency and configured center frequency.
- **Avg Power** records the average power of the entire capture in dBm.
- **Peak (+/-)** records the minimum and maximum peak of the audio signal, recorded in Hz for FM and depth% for AM
- **RMS** records the root mean square of modulation. RMS is displayed as Hz for FM and depth% for AM.
- **Modulation Rate** records the frequency of the AM/FM modulation.
- **SINAD** (SIgnal-to-Noise And Distortion ratio) records the signal quality defined by the function

$$SINAD = \frac{Psignal + Pnoise + Pdistortion}{Pnoise + Pdistortion}$$

**THD** (Total Harmonic Distortion) records the presence of harmonic distortion in the audio signal as defined by the function

$$THD = \frac{\sqrt{V_2^2 + V_3^2 + \dots + V_9^2}}{V_1}$$

or in words, the RMS of the first nine harmonics to the RMS of the fundamental frequency.

Both SINAD and THD measurements occur for AM or FM depending on which demodulation type is selected for Zero-Span.

# 4.10 INTERFERENCE HUNTING

Interference is a critical concern wherever RF signals are broadcast or regulated. When links are noisy, signals are dropped, or data rate is low, interference is a likely culprit. If interference is present, then there will be an elevated noise floor on the receive channel. The interfering signal itself may not be on the receive channel, however it must be within the analyzer's bandwidth. Interference Hunting mode provides tools to help spot and characterize such a signal.

Figure 40: Detecting events in Interference Hunting mode with an acquired baseline. Yellow area on right is an exclusion zone.

A signal can be detected by setting a baseline, or an amplitude threshold above which a signal is considered suspicious. Any time a signal occurs above this baseline level, an "event" is created in software to describe this instance in as much relevant detail as possible. An event stores the frequency, bandwidth, peak level or channel power, threshold (baseline level at that frequency), margin (decibels over threshold), start time, and duration of the signal.

Events are then displayed in a list on screen that updates after every sweep, and they can be logged as they occur in a CSV file. Logging allows for unmanned operation over an extended period of time, which is especially useful for sparsely intermittent signals. The software can sit for days watching, and it will automatically capture all relevant details of interesting signals, producing data for later inspection.

### 4.10.1 Setting a Baseline

A baseline can be either a flat line, representing a single amplitude level threshold, or can be acquired over a period of sweeps. In the latter case it may represent, for example, a max held image of the noise floor.

monther

Figure 41: A flat baseline.

Figure 42: An acquired baseline.

A flat baseline can be set instantly by simply choosing a threshold level. A baseline is acquired by setting a time interval for acquisition, and a mode of acquisition-- min hold, max hold, or average. Once acquired, a decibel offset can be applied to move the baseline to the desired location on the amplitude axis. Acquired baselines can be exported and imported, using a CSV format.

#### 4.10.1.1 Baseline File Format

A baseline is saved as a CSV file, consisting of a header and a list of points defined as (frequency, amplitude) pairs. If you export an active baseline, you will observe the file format below.

BASELINE, Version 1 startFreq, 2.00E+09 binSize, 100.0E+06 RBW, 30.0E+03 VBW, 30.0E+03 refLevel, -20.00 div, 10.00 timestamp, 1.50714E+12 offset, 5.00 frequency(Hz), amplitude(dBm) 2.00E+09, -50.00 2.10E+09, -51.00 2.20E+09, -48.00 2.30E+09, -39.00 ...

•••

#### Table 1: Baseline file format example.

The frequency of each point is inferred from *startFreq* and *binSize* as defined in the header; the first point's frequency is equal to *startFreq*, and each following frequency is spaced *binSize* from the one before it. The frequencies listed are for convenient reference and are NOT USED when importing the baseline.

RBW, VBW, refLevel, and div reflect the sweep settings at the time of capture. Like the timestamp and point frequencies, they are for reference and are ignored. Offset refers to the dB offset specified in the Baseline section of the General Control Panel.

Custom baseline CSV files utilizing this format can be edited or created in a spreadsheet editor and then imported.

## 4.10.2 Defining Events

For a single sweep, an event is the portion of a signal that is above the baseline. However, since an event has a time dimension, and may exist over multiple sweeps, the issue arises of when to consider a single-sweep event to be merely a snapshot of an ongoing multi-sweep event, when to consider it as the full event, and when to not consider it an event at all.

Figure 43: A single-sweep snapshot of an event.

Two parameters are available to fine-tune what constitutes an event in the time domain—frequency deviation and minimum duration. Deviation refers to the maximum allowable difference in center frequencies between consecutive snapshots for those snapshots to be considered part of the same event. Minimum duration sets a lower bound on how long a signal must persist before being considered an event.

Figure 44: The frequency deviation between two single-sweep snapshots of an event.

To maximize capture and catch quick or jumpy signals, set minimum duration to zero and deviation to a high value. To more tightly restrict what constitutes an event for more persistent and steady signals, set minimum duration to a higher value and dial down deviation.

## 4.10.3 Regional Zoom

Interference Hunting mode provides regional zoom functionality, which allows for close visual inspection of specific parts of spectrum without changing span.

959.999582 MHz		.040000 GHz
		~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
949.999587 MHz	999.950737 MHz	1.049902 GHz

Figure 45: The regional zoom controller.

The regional zoom controller is located below the main sweep plot, appearing as a horizontal strip. It is used to control what portion of the sweep is visible in the main plot by adjusting the lower and upper bounds of the unshaded region. These bounds, visible as vertical black lines, to the left and right of which are the unseen shaded regions, can be dragged in either direction, and the entire unshaded window can be dragged.

The full sweep at the current span setting, along with any baselines and events, is always visible in the regional zoom controller.

#### Figure 46: Regional zoom being used for close inspection of event.

#### 4.10.4 Exclusion Zones

Exclusion zones are areas of spectrum where events cannot occur. By excluding known sources, large areas of spectrum can be monitored with decreased risk of false positives. An exclusion zone is defined by a start and stop frequency.

Figure 47: A signal breaking a flat baseline threshold and falling partially within an exclusion zone (the yellow shaded portion). Only the unexcluded part of the signal is considered an event (the red shaded portion).

### 4.10.5 Spectrogram

The spectrogram, or waterfall, is a useful view in this mode, and can optionally appear above the main plot. It is described in more detail in <u>Display Modes</u>.

## 4.10.6 Sweep Settings Control Panel

See Sweep Settings Control Panel in Swept Analysis Mode.

### 4.10.7 Interference Hunting Toolbar

• **Spectrogram –** Enables the spectrogram display. See <u>Spectrogram.</u>

### 4.10.8 General Control Panel

The General control panel contains the basic controls specific to Interference Hunting mode. It is divided into two sections, Baseline and Events, which are the two main abstractions introduced by the mode.

#### 4.10.8.1 Baseline

A baseline defines the threshold, at each frequency it contains, above which a signal is considered to be an event. A baseline can be either a flat line, where the threshold is the same across all frequencies, or it can be acquired from a signal over a period of time.

- **Threshold** Specifies which type of baseline is being used: an acquired one, or a flat line (minimum signal).
- **Enabled** Specifies whether a baseline will be displayed on plots and used to detect events.
- Acq Time The amount of time over which a new baseline is acquired.
- Acq Mode What type of

#### Figure 48: Baseline subset of General Control Panel

accumulation function to use on consecutive sweeps during baseline acquisition.

- **Offset –** The amplitude offset of an acquired baseline from its original level.
- **Flat Line** The amplitude that is the constant threshold for what is considered an event.
- Import Load a saved baseline.
- **Export –** Save the current baseline.
- **Acquire Baseline** Begin acquiring a new baseline according to the current acquisition rules.

#### 4.10.8.2 Events

An event is an incident where the input signal jumps above the threshold set by the baseline over a frequency range. It is defined by a frequency, bandwidth, peak level or channel power, threshold

(baseline level at that frequency), margin (decibels over threshold), start time, and duration of the signal.

- Min Duration The minimum amount of time a signal must break the baseline to be considered an event.
- **Deviation** The allowable variation of the center frequency of an event.
- Level The mode of level calculation.
  - **Peak –** The highest amplitude of event. 0
  - **Channel Power –** The channel power surrounding the center frequency of the event.
  - Auto-Width In Channel Power
- Events Min Duration 0.000000 us Deviation 1.000000 kHz Level Peak Auto-Width ~ 25.000000 kHz Bandwidth Freq Format Center / Bandwidth Dur Format Extended (hh:mm:ss:ms) ÷ Color
- Figure 49: Events subset of General Control Panel mode, automatically choose a bandwidth for channel power computation.
- Bandwidth In Channel power mode, manually input a bandwidth for channel power computation.
- Freq Format The frequency format to be used in event list and logging.
  - **Center / Bandwidth –** Specify an event using its center frequency and bandwidth.
  - Start / Stop Specify an event using its start and stop frequencies. 0
- **Dur Format –** The duration time format to be used in event list and logging. •
- **Basic (s)** Display time in seconds.
- Extended (hh:mm:ss:ms) Display time in clock format. •
- **Color –** The color of an event on the plots.

### 4.10.9 Measurements Control Panel

See Measure Control Panel in Swept Analysis Mode.

### 4.10.10 Exclusion Zones Control Panel

An exclusion zone is an area of spectrum in which an event cannot take place. An exclusion zone is defined by a start and stop frequency. It is useful for ignoring known sources.

	Name	Start	Stop
	✓ LTE	1.850000 GHz	3.800000 GHz
2	Bluetooth	2.402000 GHz	2.480000 GHz
		Add Zone	
	R	Add Zone emove Zone	
	R	Add Zone emove Zone Clear	
	R	Add Zone emove Zone Clear	
	Ri iolor	Add Zone emove Zone Clear	
	olor All	Add Zone emove Zone Clear	lone

- Add Zone Adds a new exclusion zone definition to the list and activates it.
- **Remove Zone -** Removes the highlighted exclusion zone definition from the list.
- **Clear –** Removes all exclusion zone definitions from the list.
- All Activates all exclusion zone definitions in the list.
- None Deactivates all exclusion zones definitions in the list.
- Import Import a saved set of exclusion zone

83

definitions.

• **Export** – Export the current list of exclusion zone definitions for later loading.

Figure 50: Exclusion Zones Control Panel

### 4.10.11 Logging Control Panel

Events can be logged in real time as they occur by being automatically written out to a CSV log file. Logging can occur over long periods of time and does not require monitoring. Logging continues until either the logging is manually cancelled, a set amount of time has elapsed, or a set number of maximum events has been reached.

Logging					
Save Directory	Select	Capture Size	1.000 s	Time Elapsed:	0
	C:/Users/Roger/Documents/SignalHound	Unlimited Events	$\checkmark$	Events Captured:	0
File Prefix	IHLOG	Max Events	1000	File Size:	0
	Start	Max File Size (GB)	1.000	Disk Free:	145.9233 GB

Figure 51: Logging Control Panel

- Save Directory The default directory for the CSV event list files to be stored.
- File Prefix Applies a file name prefix to all files saved. Useful for creating identifiable file names.
- **Capture Size** Specifies the length of time during which logging takes place.
- **Unlimited Events** No upper limit on events captured-- continue for the duration of the capture size.
- **Max Events** The maximum number of events that can be logged during one capture.
- Max File Size The maximum file size allowed for a CSV log file.

### 4.10.12 Event List

Current events appear in the event list, which is updated every time a new sweep arrives from the device. The event list can be continuously sorted by any of its columns and can be exported to a CSV file for a quick snapshot of events occurring at that time. When events are cleared, all future events are considered new, and start times begin at the time received and durations begin at zero.

Event List								
Export Events		Center Freq	Bandwidth	Level (dBm)	Threshold (dBm)	Margin (dB)	Start Time	Duration
Clear Events	3	999.999565 MHz	624.999728 kHz	-40.137	-81.000	40.863	20/07/2017 08:15:24:794	00:01:05:440
	2	120.039010 MHz	78.124966 kHz	-80.345	-81.000	0.655	20/07/2017 08:15:55:115	00:00:35:119
	4	2.999999 GHz	468.749796 kHz	-60.766	-81.000	20.234	20/07/2017 08:15:56:445	00:00:33:789

Figure 52: Event List

- **Export Events** Save the current event list table to a CSV file, preserving the current sorting rule.
- **Clear Events –** Delete all events in event list table.

# 4.11 SPECTRUM EMISSION MASK

The spectrum emission mask (SEM) measurement is used to detect out of band spurious, interfering, and excessive emissions. Emissions are tested against a mask that can be defined as relative to the inband power of a signal at frequency offsets relative to the center frequency.

Masks are entered manually in the offset table. Spike also contains several preset masks that can be loaded directly into the table. Mask offsets are drawn on the graticule using shaded regions, green for passing, red for failing.

When configuring the SEM measurement, an input level should be chosen that is as close to the expected input power as possible. This will improve the dynamic range of the measurement. An IF overload message will appear if the input power is set too low.

All configured offsets are measured relative to an amplitude reference. This reference is measured using either a peak measured value, the channel power, or directly set by the user. The span of which the peak or channel power is measured is selectable and defaults to the span between the first configured offset. The reference is calculated for each sweep.

The plot in SEM mode adheres to the basic plot interface in Spike.

## 4.11.1 Control Panel

The following is a description of the various controls in the SEM Settings control panel.

- **Center Freq** The reference frequency for the offset table and tuned center frequency of the sweep.
- **Step –** Controls the frequency step size when using the center freq arrows.
- Span Frequency span around the center frequency.
- **RBW –** Resolution bandwidth, using a flattop window.
- **VBW –** Video bandwidth.
- Input Level The maximum expected input level of the signal.
- **Div –** Controls the plots y-axis scale.
- **Video Units** In the system, unprocessed amplitude data may be represented as voltage, linear power, or logarithmic power. Select linear power for RMS power measurements. Logarithmic power is closest to a traditional spectrum analyzer in log scale.
- **Detector** As the video data is being processed, choose whether min/max or avg amplitudes are stored.
- **Trace Type –** Specify whether a clear/write or max hold trace is used.
- **Meas Type –** Specify how the reference amplitude is measured.
- **Reference –** Specifies the amplitude reference directly.
- Width Set Specify the range of frequencies over which the channel power amplitude measurement reference is calculated.
  - When set to *Auto* the span between the center frequency and first frequency offset is used.
  - When set to *Manual* the entered width is used.
- Width Direct set width.
- Meas Width Actual measurement width.
- Load Mask Load a predefined offset table based.

### 4.11.2 Context Menu

• **Show Pass/Fail Indicator –** Toggles visibility of pass/fail indicator located at top center of graticule.

### 4.11.3 Configuring Offsets

Up to 16 offsets can be configured. Offsets can be tested against an absolute amplitude or one relative to the measured power of the in-band channel and can have linear shape (flat or linear slope). Offsets are configured as uppers offsets but are then applied as both upper and lower, symmetrical around the center frequency.

		State	1	itart Freq	Stop Freq	Limit Start	Limit Stop	Mode	
Save Table	1	Enabled	*	10.000000 kHz	20.000000 kHz	-25.000	-25.000	Relative	
	2	Enabled	*	20.000000 kHz	30.000000 kHz	-35.000	-35.000	Relative	
Load Table	3	Enabled	*	30.000000 kHz	60.000000 kHz	-35.000	-65.000	Relative

Offset Table Results Figure 54: SEM offset table editor.

### 4.11.4 Results

The result of each configured offset is displayed in the results table. The results table shows the largest margin of both the upper and lower offset on one row. Results can be exported to a custom CSV.

The frequency and level columns display the frequency and amplitude of the worst margin in the given offset.

## 4.11.5 Limitations

Not all Signal Hound devices can perform all mask measurements. The dynamic range limitations of some Signal Hound devices such as the SA44, SA124, and BB60 series spectrum analyzers might prohibit certain mask measurements such as the AM/FM masks at the outer offsets. To avoid failing measurements in these situations it might be necessary to disable the outer offsets.

(A note about the legacy software broadcast mask measurements.) The legacy Signal Hound software performed custom sweeps to help overcome the dynamic range limitations of the SA series devices. These custom sweeps are not performed in the Spike software and thus you might have different results when comparing to the legacy software, particularly when comparing the FM broadcast mask measurements.

# 4.12 NOISE FIGURE

Noise figure measurements are available for SM, SP, and BB series devices. For more information, see <u>Limitations</u>.

Noise figure is a measure of the noise a device contributes to a signal, expressed as the degradation in signal/noise ratio as the signal passes through the device. It is not a direct measurement, but is computed, using the Y factor technique, from several measurements taken by the spectrum analyzer.

Figure 56: Noise figure and gain plots of a small wideband amplifier, tested with an SM200A and an Agilent 346B noise source.

## 4.12.1 Process Overview

The measurement consists of two steps, each of which measures the noise power level when the noise source is in an ON and OFF state. In the first step (calibration), the noise source is connected directly to the spectrum analyzer. Then, in the second step (DUT measurement), the DUT is inserted in the signal chain between the noise source and the spectrum analyzer.

The DUT properties are derived from the difference between the DUT measurement system and the calibration system.

Once a calibration is performed for the current configuration, repeated measurements can be taken without the need for repeating the calibration step.

## 4.12.2 The Y Factor Method

The Y factor technique is a common method of calculating noise figure (NF). Its computations are carried out in terms of noise temperature (T) in linear scale.

Noise figure is expressed on the logarithmic scale. Noise factor (F) is the linear equivalent:

$$NF = 10 \log_{10} F$$

(1)

The Y factor is defined as the linear ratio of noise power level when the noise source is ON and OFF:

$$Y = \frac{N_{ON}}{N_{OFF}}$$

(2)

The Y factor can be converted to noise temperature:

$$T = \frac{T_{Source}^{ON} - Y \left( T_{Source}^{OFF} \right)}{Y - 1}$$

(3)

where  $T_{Source}^{ON}$  is the excess noise ratio (ENR) of the noise source, and  $T_{Source}^{OFF}$  is the ambient room temperature, generally considered to be 290 K.

Noise factor can then be derived from noise temperature:

$$F = 1 + \frac{T}{T_{Source}^{OFF}}$$

(4)

The measurement setup is considered a two-stage system, where the DUT is stage 1, and the spectrum analyzer is stage 2. The noise factor of a two-stage system ( $F_{12}$ ) can be derived from the noise factors of its component stages ( $F_1$ ,  $F_2$ ) and the gain of its first stage ( $G_1$ ):

$$F_{12} = F_1 + \frac{F_2 - 1}{G_1}$$

()
----

This equation can be written in terms of noise temperature for stage 1:

$$T_1 = T_{12} - \frac{T_2}{G_1}$$

(6)

DUT gain is computed:

$$G_1 = \frac{N_{12}^{ON} - N_{12}^{OFF}}{N_2^{ON} - N_{12}^{OFF}}$$

(7)

So, after noise temperatures have been calculated from the calibration ( $T_2$ ) and DUT measurement ( $T_{12}$ ) steps, the noise figure of the DUT is calculated using equations 4, 6, and 7.

### 4.12.3 Control Panel

The following is a description of the various controls in the Noise Figure Settings control panel.

- **Freq Mode** Choose between *Swept* and *Fixed* mode. In swept mode the number of measurement points specified by *Points* are evenly distributed across the span. In *Fixed* mode, only the *Fixed Freq* is tested.
- **Start/Stop** The lowest and highest frequencies to test (when not in fixed mode).
- **Center –** The center of the range of frequencies to test (when not in fixed mode).
- **Span –** The range of frequencies to test (when not in fixed mode).
- **Points** The number of frequencies to test, evenly spaced across the span (when not in fixed mode).
- **Fixed Freq –** The frequency tested in fixed mode.
- **Ref Level –** The power level of the top graticule line.
- **RBW** Resolution bandwidth, using a flattop window.
- **VBW** Video bandwidth.
- **Auto RBW** Having auto selected will choose reasonable and fast RBWs relative to the meas span. When changing meas span, it is recommended to have this enabled along with Auto VBW.
- **Auto VBW –** When enabled, VBW will equal RBW.
- **Meas Span** The span of the sweeps taken during measurement at each test frequency.
- **Averaging** If averaging is enabled, then for each frequency test point, the number of power readings defined in "Avg Number" will be averaged.
- **Avg Number** The number of sweeps averaged during measurement at each test frequency, if averaging is enabled.
- **Room Temp** The ambient temperature of the room, in Kelvin.
- **Play Alert** When enabled, a sequence of beeps will play when a full sweep through the measurement points is completed.
- Noise Source (Cal) Select the noise source to be used for the calibration step. (See <u>Noise</u> <u>Sources & ENR Tables</u> for more info.)
- **Noise Source (Meas)** Select the noise source to be used for the measurement step. (See <u>Noise Sources & ENR Tables</u> for more info.)
- **Manage ENR Tables** Opens a manager for the persistent collection of noise source ENR tables. (See <u>Noise Sources & ENR Tables</u> for more info.)

#### 4.12.3.1 Noise Sources & ENR Tables

When the noise source is receiving power (ON state), its "hot" noise temperature is the excess noise ratio (ENR) at the frequency being measured. A table of ENR values is a part of the spec of a noise source, and is often printed on the device. This table must be manually entered into the software to obtain accurate measurements.

The ENR Table Manager allows for the addition, removal, renaming, and editing of points of each ENR table. It is accessed via the "Manage ENR Tables" button. Once entered, an ENR table will persist across sessions until deleted. There is no limit on the number of ENR tables that may be stored, although in practice this would not exceed the number of noise sources available for use.

The table(s) used for calibration and measurement are saved and loaded in global presets and matched by name to the current noise source list.

### 4.12.4 Results Table

This table displays the measured noise figure and gain at each frequency tested. The table can be exported as a CSV file using the "Export Results Table" button.

Export	t Results		Frequency	Noise Figure (dB)	Gain (dB)	
Ta	able	1	1.001000 GHz	4.23	38.82	
		2	1.201000 GHz	4.34	38.10	
		3	1.401000 GHz	4.29	38.38	
		4	1.601000 GHz	4.47	37.31	
		5	1.801000 GHz	4.46	37.50	
		6	2.001000 GHz	4.40	37.06	-

Figure 58: Noise figure results table.

### 4.12.5 Making Measurements

Taking a noise figure measurement is a process that consists of a sequence of manual steps with different physical connections. Because of this, Noise Figure mode does not make continuous measurements.

At any point a measurement can be cancelled using the "Abort" button on the progress dialog. This will revert the state to before the aborted measurement was begun.

#### 4.12.5.1 Calibration

For the most accurate characterization of the DUT, the system should first be calibrated. This establishes a baseline, accounting for the analyzers's noise contribution, that can later be subtracted out to isolate the DUT's performance. This process is often called second stage correction.

The calibration step is optional. If the DUT has high gain (exceeding 30 dB), and the spectrum analyzer has low noise figure, then the second stage error is minimal, and calibration can be skipped. Otherwise, skipping calibration will generally result in substantially higher errors. Note that calibration is required for gain measurement.

Calibration is initiated with the "Calibrate" button on the main toolbar. When this process is complete, measurements can be taken with maximum accuracy. A calibration will hold (i.e. calibration data is stored in memory) for the duration of the Spike session, or until the configured measurement points change. In practice, measurement points are affected by the settings in the control panel's "Frequency

List" section. If other aspects of the configuration change, such as sweep settings or averaging, the current calibration will continue to be utilized, but at a reduced measurement accuracy.

The software is always in one of three calibration states, shown as "Cal State" in the toolbar:

- Uncal (red) There is no valid calibration currently stored. High measurement error is likely unless the DUT has at least 30 dB gain.
- ~Cal (yellow) There is a valid stored calibration, however the measurement accuracy has been reduced due to changes in the configuration since last cal.
- Cal (green) There is a valid stored calibration whose settings are identical to the current configuration.

A fresh calibration can be run at any time. For the most accurate measurements, run a calibration whenever settings change and the calibration state goes out of green "Cal".

#### 4.12.5.2 Measurement Process

Throughout the measurement process, modal dialog boxes will prompt the user to make the necessary connections.

The process is as follows:

- 1) Configure the measurement.
  - a. Define the frequency list using the "Frequency List" section of the control panel. This is the list of test frequencies at which measurements will be performed. If "fixed" is checked, then the frequency list will contain one frequency only, that defined by "fixed freq". Otherwise, the span between start and stop will be divided evenly by the number of points.
  - b. Define the measurement settings. This includes the settings for each sweep (meas span, the Amplitude and Bandwidth sections of the control panel), the number of sweeps to average at each point (Avg Number), the ambient temperature (Room Temp), and selecting the ENR table that corresponds to the noise source being used.
- 2) Calibration (Optional).
  - a. Connect the noise source directly to the spectrum analyzer.
  - b. Follow prompts to switch power to the noise source on and off.

#### Figure 59: Noise figure calibration step setup.

- 3) DUT Measurement.
  - a. Insert the DUT in the signal chain between the noise source and the spectrum analyzer.

Figure 60: Noise figure DUT measurement step setup.

- 4) Results.
  - a. Noise figure and gain calculations at each frequency will be shown in the Noise Figure and Gain plots, and the Results table.
- 5) Repeat steps 3 4 as desired, or return to step 1 to define a new configuration.

### 4.12.6 Annunciator List

#### 4.12.6.1 Invalid

If the noise figure or gain calculation fails, an "Invalid" annunciator will be printed in red on the noise figure and gain plots.

This will happen if the signal measured with the noise source powered ON is ever not higher than the signal with the noise source powered OFF. In this case, make sure the noise source is powered and generating a signal as expected and retake measurement.

Some potential remedies to this issue include:

- Using a noise source with sufficient ENR
- Increasing averaging
- Increasing meas span
- Setting reference level for maximum sensitivity
  - The table below shows what this value would be for compatible analyzers:

SM200/435	-20 dBm or lower

SP145	-30dBm or lower
BB60C	-50 dBm or lower
BB60D	-30 dBm or lower

#### 4.12.6.2 IF Overload

This indicates that an IF overload occurred during a measurement. See "IF Overload" in Annunciator List.

#### 4.12.6.3 IF Overload (Cal)

This indicates that an IF overload occurred during the calibration utilized by the measurement. See "IF Overload" in <u>Annunciator List</u>.

## 4.12.7 Limitations

- **SA Series** Noise figure measurements are not available for SA series devices. Their use of software image rejection makes them unsuitable for broadband noise signals.
- **BB Series** For best results, keep ENR + gain below 40 dB.
- SP Series For best results, keep ENR + gain below 50 dB.
- **SM Series** For best results, keep ENR + gain below 60 dB.

# 4.13 BLUETOOTH® LOW ENERGY

The Bluetooth Low Energy measurement mode allows customers to perform general purpose Bluetooth Low Energy measurements as well as test Bluetooth Low Energy waveforms against the Bluetooth Special Interests Group (SIG) test specifications for Bluetooth Low Energy transmitters. The Spike software performs automatic detection and demodulation of Bluetooth Low Energy waveforms and displays the results in several standard measurement windows. Additionally, decoded Bluetooth Low Energy packets can be saved to a .pcap file for further analysis in many pcap file analyzers. These features make Spike an affordable and easy option for Bluetooth Low Energy troubleshooting, precompliance, monitoring, and device manufacturing.

The Spike software supports waveforms meeting the specifications outlined in the core 5.2 spec. Spike supports the 1MHz PHY only.

## 4.13.1 Measurement Concepts

#### 4.13.1.1 Demodulation

When *Demod* measurement type is selected, Spike performs packet demodulation at the center frequency selected. An I/Q capture with a specified search length is performed, and a valid waveform is searched for over this interval. If a valid Bluetooth Low Energy waveform is detected, full demodulation occurs, any applicable transmitter tests are performed, and the measurement windows are updated. This will update all plots except the in-band emissions plot.

Detection is performed using a moving average power detector combined with a preamble detect. If a valid preamble is detected the access address and PDU header is decoded. The PDU is de-whitened using either the center frequency selected or if overridden, the specified channel index. The waveform is rejected if the signal length does not match the expected size as specified in the PDU header.

#### 4.13.1.2 Transmitter Testing

The Spike software performs the following transmitter tests as defined by the Bluetooth® SIG\*.

- TP/TRM-LE/BA-BV-01-C, output power
- TP/TRM-LE/BA-BV-03-C, in-band emissions
- TP/TRM-LE/BA-BV-05-C, modulation characteristics
- TP/TRM-LE/BA-BV-06-C, carrier frequency offset and drift

\*Tests are defined in RF-PHY.TS.p15.

By default, test limits are defined to match the specification. Test limits can also be changed by the user.

Output power, modulation characteristics, and carrier offset and drift measurements are all performed in the demodulation measurement mode. These tests are performed automatically when a valid payload is detected.

- Output power measurements are performed over all valid Bluetooth Low Energy waveforms.
- Carrier offset and drift measurements are performed when the physical layer PDU bits (transmitted bits) are equal to the pattern 10101010 or 01010101.
- Modulation characteristic measurements are performed when the physical layer PDU bits (transmitted bits) are equal to the pattern 00001111 or 11110000. Please note, some measurements such as f2/f1 require both 01010101 and 00001111 patterns to be transmitted before a valid measurement can be made.

The PDU type does not have to be a test packet (access address 0x071764129) for the payload bits to be checked, any PDU type will be searched.

#### 4.13.1.3 In-Band Emissions

The in-band emissions test is activated by selecting the in-band emissions measurement type in the control panel. When this measurement is active, only the in-band emissions measurement plot is updated.

The in-band emissions test is performed by perform a sweep over the full 2.4GHz band using the sweep configuration outlined in TRM-LE/BA/VB/03. The transmit channel is automatically detected by looking for the highest channel power from the 40 Bluetooth Low Energy transmit frequencies.

The sweep configuration used is,

• Span = 81MHz

- RBW = VBW = 100kHz
- Detector = Average
- Sweep time = 100ms

### 4.13.2 Control Panel

The following is a description of the measurement controls found on the Bluetooth Low Energy Settings control panel.

- **Measurement** Select between demodulation measurements and in-band emissions. See the Bluetooth Low Energy Measurement Concepts section for more information.
- **Channel** Quick frequency select. This control is used to change the center frequency for demodulation measurements.
- **Carrier Freq** Manual frequency selection for demodulation measurements. When Override Ch. Index is unselected, the carrier frequency determines the transmit channel and therefore the seed used for PDU de-whitening.
- **Step Freq** Controls the amount the carrier frequency changes when using the arrow buttons next to the carrier frequency control.
- **Bandwidth** Specify the acquisition bandwidth for demodulation measurements.
- **Override Ch Index** When enabled, the channel index can be specified manually for purposes of PDU de-whitening. This allows measurements on signals generated at any frequency. When disabled, the channel index is inferred from the carrier frequency setting.
- **Channel Index** When override channel index is enabled, the channel index is used to seed the PDU de-whitening.
- **Ref Level –** Specifies the maximum input power to the spectrum analyzer.
- **Search Len** Specifies the length of the window in which a valid waveform is searched. Longer search lengths increase capture probability at a decrease in measurement speed.
- Edit Test Limits Change the test limits for the transmitter tests. Limits are only stored in the user presets. Modified limits do not persist through program instances unless saved and loaded through the preset menu.
- **Select Save Dir –** Select the default directory in which PCAP files are stored.
- **Start Recording –** Starts the PCAP recording. See <u>PCAP recording</u> for more information.

### 4.13.3 Bluetooth® Low Energy Measurement Windows

Measurement windows can be added to the plot area using the *Add Measurement* combo box.

File	Edit Presets	Settings	Analysi
	Add Meas	urement 👻	
In Ba	AM vs Time S	Search	Ī
0.00	AM vs Time C	Capture	
-10.00	FM vs Time S	Search	
-20.00	FM vs Time C	Capture	. P
-30.00	Eye Diagram		t
-40.00	Spectrum		ľ
-50.00	Dit Info		ľ
-60.00	DILINIO		ľ
-70.00	Transmitter (	Characteristics	; [
-80.00	In Band Emis	ssions	
-90.00	in Band Emia		

Most measurement plots use the <u>basic plot</u> interface.

#### AM vs Time Search × -10.00 dBm AM vs Time -20.00 -30.00 -40.00 -50.00 -60.00 -70.00 -80.00 الأداد البالية -90.00 -100.00 -110.00<mark>0.0 s</mark> Time 9.999875 ms

#### 4.13.3.1 AM vs Time Search

The AM vs Time search plot is active for demod measurements and shows the full waveform search period. If a waveform was detected it will be underlined in blue. This plot will update even if no signal was found, making this plot useful for troubleshooting, or verifying signal activity at the frequency of interest. Both capture status and annunciators are present on this plot.

The annunciators that can appear in this plot are:

- **No Signal Found**, indicates the power detect algorithm did not detect a packet. This can occur if the signal to noise ratio is too low, or if the packet started before the search window took place (search window starts in the middle of an already started packet.

- **No Preamble Found,** indicates the leading edge of the packet did not appear to contain a valid preamble. Valid preambles will contain at least 8 alternating bits. If the SNR is too low, or if the frequency offset is too large, this error can occur.
- **Format Error Detected**, can indicate the expected waveform does not match the measured waveform. When the demodulated header does not match a valid pattern, or when the expected payload extends beyond the packet signal this error can occur. This is most common when an interfering packet is transmitted mid packet, or when the SNR is too low.

#### 4.13.3.2 AM vs Time Capture

This plot shows the amplitude vs time over the captured waveform, from the first symbol of the preamble to the last symbol of the CRC.

#### 4.13.3.3 FM vs Time Capture

This plot shows the frequency vs time over the captured waveform, from the first symbol of the preamble to the last symbol of the CRC.

#### 4.13.3.4 Eye Diagram

The eye diagram shows every FSK symbol transition in the captured waveform. The eye diagram can provide a quick at-a-glance view of the signal health, including frequency offset, drift, noise, filter performance, or symbol timing errors.

#### 4.13.3.5 Spectrum

The spectrum is calculated over the capture interval. A Nuttall window is used.

#### 4.13.3.6 Bit Info

Bit Info	×												
Preamble	10101010												
Access Addre	0x71764129												
PDU Type	Test Packet												
Туре	0111 (01010101)												
RFU	0000												
Length	01111111 (127)												
CRC	0xA2CACD (Passed)												
Bits	10101010100101001000001001101110100001111												

The bit info plot displays the various data components of the captured waveform. Each component of the PDU header is displayed as well as the bits for the entire capture. The PDU type is determined both from the current channel index selected and the access address value. The CRC pass/fail message is only displayed for advertising and test PDU types.

#### 4.13.3.7 Transmitter Characteristics

This plot displays all transmitter test results except in-band emissions. Test results appear once a valid packet has been detected for that test. Results are averaged/max-held for up to 10 captures. Test results can be reset by changing any configuration parameter or by pressing the *Recal* button.

#### 4.13.3.8 In-Band Emissions

This plot displays the test results of the in-band emissions transmitter test. This plot is only updated when the measurement type is set to *In-Band Emissions*. See <u>Measurement Concepts: In-Band Emissions</u> for more information.

### 4.13.4 PCAP Recording

The Spike software can be configured to store every successful demodulated packet into a .pcap file. The pcap file uses the libpcap file format with the LINKTYPE\_BLUETOOTH\_LE\_LL\_PHDR link layer header type. When recording is active every packet displayed when the *Demod* measurement type is active is stored into the pcap file. Recording can be started and stopped using the Start/Stop button on the control panel.

Spike does not provide software which displays the contents of the pcap files. Several third-party applications exist for this.

# 4.14 WLAN MODULATION ANALYSIS

The Spike software can be used for 802.11b/a/n/ac/ax/ah modulation analysis. The software performs several physical layer (PHY) measurements including RF quality and performance metrics, channel characterization, and bit level troubleshooting.

This section covers the various settings and controls for performing measurements, the measurement windows, demodulation procedure, and finally a measurement walk through.

WLAN measurements are available for SM, SP, and BB series devices.

### 4.14.1 Control Panel

The following are descriptions of the various settings available on the control panel.

- **Standard** Select the WLAN standard you wish to measure. When measuring 40MHz signal, the 40MHz standard must be selected. For AH signals, bandwidth is automatically detected.
- **Max DSSS Symbols** Maximum number of DSSS symbols to measure. Applies to 802.11b waveforms only. Packets are truncated to this length.
- **Decode PSDU** When enabled, OFDM PSDUs are decoded and shown in the decoded bits view. Only BCC encoded payloads can be decoded in Spike. This setting does not apply to DSSS waveforms.
- **Symbol Offset** (OFDM only) Specify a symbol offset as percentage of the guard interval. Specify a value between -100 and 0.0. -50% is default and results in sampling the symbol halfway through the guard interval. -25% offset results in sampling the symbol 75% of the way through the guard interval. When a short GI is detected, the symbol offset will become a % of the short GI length.
- **2.4 GHz Ch.** Select a carrier frequency by selecting an industry defined channel. This has the same effect as manually entering a new carrier frequency.
- **5 GHz Ch.** Select a carrier frequency by selecting an industry defined channel. This has the same effect as manually entering a new carrier frequency.
- **Carrier Freq** Select the center frequency of the measurement. For all OFDM waveforms, this should be the frequency of the center-most null DC subcarrier. Ensure the carrier frequency is within +/- 624KHz for 20/40MHz OFDM and +/-2.7MHz for DSSS signals of the channel center frequency. Outside of these limits, the software will not be able to achieve proper carrier recovery and symbol synchronization.
- **Step Freq** Select the frequency step size when using the up/down frequency buttons. This can be useful for stepping through several adjacent channels.
- **IF BW** Select the baseband filter bandwidth. This filter is applied before the measurement is performed. This filter should be wide enough to accommodate the signal of interest. If the BW it too wide, it may allow triggering on adjacent channels.
- **Ref Level** Determines the maximum signal input level before potential IF overload and clipping occur. For OFDM signals this may be several dB above the expected average power of the input signal due to OFDM having a high PAPR. Reference level also adjusts the sensitivity of the instrument. If reference level is too high relative to the signal level, this will negatively affect SNR and ability to trigger on packets.
- **Meas Filter** DSSS pulse shaping filter applied to the waveform. Currently this is fixed as a rectangular window.
- **Filter Bbt** Adjust the pulse shaping filter coefficient. Currently not used when the rectangular window is applied.
- **Search Len** Length of search window. See Measurement Concepts for more information.
- **OFDM Trig Threshold** Specify a sliding window trigger threshold for OFDM measurements. The threshold must be positive. A lower threshold triggers signals with lower SNR at the expense of triggering on erroneous signals. This threshold is roughly the level above the noise floor (in the time domain) needed for packet detection to occur.
- **DSSS Trig Level** Video trigger level used for DSSS measurements. This is an absolute trigger level. The AM vs Time (Search) window can be used to estimate a valid trigger level when first setting up a measurement.

### 4.14.2 Measurement Windows

Several measurement windows can be added to the main application. Most measurement windows target either OFDM or DSSS modulations. A quick setup button is available to quickly switch between OFDM and DSSS measurement window configurations. Additionally, the measurement layout can be saved and loaded through the presets.

Most measurement plots use the <u>basic plot</u> interface.

Below is a summary of some of the measurement windows.

AM vs Time (Search)				×
-10.00 dBm				
-20.00		7		~
-30.00				
-50.00				
-60.00	****			
-80.00				
-90.00				
-110.00 0.0 s	i i i Time	e :	9,998	275 ms

#### 4.14.2.1 AM vs Time (Search)

The AM vs Time search plot is active for successful and un-successful measurements and shows the full waveform search period. If a waveform was detected it will be underlined in blue. This plot will update even if no signal was found, making this plot useful for troubleshooting, or verifying signal activity at the frequency of interest. Both capture status and annunciators are present on this plot.

#### 4.14.2.2 Decoded Bits/Data

Decoded Bits/	/Data	×
Display Type	-	
Display Width		16
000000000000 0010101000010 101001100110	0000 0100 0110 0111 1111 1100 1000	•

When the PSDU is BCC encoded and Decode PSDU is selected, the decoded bits appear here. For non 802.11ax waveforms, the leading service bits and trailing zero bits are discarded, and only the specified

payload size is displayed. For 802.11ax waveforms all bits up to the post-FEC bits are displayed, including all leading zero service bits.

4.14.2.3 MAC Header Info

MAC Header Info	×
Frame Ctrl Protocol Version Type Sub Type To DS From DS More Frag Retry Power Mgmt. More Data	0x0000 00 00 (Management) 0000 (Association R) 0 0 0 0 0 0 0

4	•

This window shows the decoded payload as a MAC header. This window will only show valid MAC header info for non-aggregate payloads.

#### 4.14.2.4 Symbol Table

| bol <sup>-</sup> | Table                                       |                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -114                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -105                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | -101 

                                                                                                                            | -99                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | -98                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | -97
