Signal Hound Announces the BB60D 6 GHz Real-time Spectrum Analyzer

BATTLE GROUND, Wash.—June 22nd, 2021—Signal Hound, a manufacturer of highly-optimized solutions for RF test and measurement equipment, announces the BB60D – a much anticipated 6 GHz real-time spectrum analyzer with significant performance improvements as compared to the highly regarded industry favorite BB60C. The new BB60D has a fully integrated preselector covering 130 MHz to 6 GHz, 10dB more dynamic range, and 10dB better phase noise from 100 Hz to 10 kHz offsets. Production of the BB60D will not replace the BB60C, it is an addition to our line of award-winning spectrum analyzers and we will build both units moving forward.

The BB60D 6 GHz real-time spectrum analyzer, with a sub-octave preselector filter bank from 130 MHz to 6 GHz

With selectable IF bandwidth from 27 MHz down to 4 kHz, 24 GHz/sec sweep speeds, and exceptionally clean spurious responses, the BB60D fits in your hand for accurate, clean, and fast RF analysis on the go. Anticipated availability of the BB60D is Q1 2022.

About Signal Hound

Signal Hound products allow professionals developing, testing, or deploying wireless monitoring, telecommunication, IoT, and M2M systems to benefit from low-cost, high-value performance RF test and measurement instruments.
