**FOR PRINT AND ONLINE RELEASE: June 21, 2022**

## Signal Hound's BB60D 6 GHz Spectrum Analyzer Now Available for Purchase

**BATTLE GROUND, Wash.—June 21, 2022**—Signal Hound's new BB60D spectrum analyzer is here and can be purchased immediately [BB60D](#)

[Signal Hound](#), a developer of highly-optimized solutions for RF signal test and measurement, has implemented feedback from our customers to create the next iteration of our powerful and portable spectrum analyzer product line, the BB60D.

With an increased dynamic range of 10 dB over our popular BB60C, this new addition to the Signal Hound lineup offers significant performance enhancements. The most notable upgrade includes the addition of preselector filters from 130 MHz to 6 GHz. The increased selectivity and improved dynamic range make the BB60D an outstanding option for spectrum analysis and RF recording.

This long-awaited release adds to an already formidable line up of products from Signal Hound. With this addition, the company continues to reinforce its commitment to providing unrivaled value in RF test and measurement technology. The BB60D can be purchased directly from Signal Hound at [www.signalhound.com](http://www.signalhound.com) or from one of our world-wide distributors.

For additional information about the BB60D, download the original press release [here](#)

### **About Signal Hound**

Signal Hound is a manufacturer of affordable, high-performance test equipment based in Battle Ground, WA. Starting out as Test Equipment Plus in 1996 and offering used test equipment and repair services, Signal Hound expanded its offerings in 2010 with the introduction of the USB-SA44 USB-powered spectrum analyzer. Signal Hound has since added several award-winning RF spectrum analyzers and signal generators, now sold globally.
