## **Signal Hound Announces Advanced Mapping Tool Kit in Spike Now Available as a Licensed Upgrade**

**Battle Ground, WA – January 20, 2026** – Today [Signal Hound](#) – manufacturer of accessible, versatile, precision test equipment – announced an upgraded Advanced Mapping Tool Kit in its flagship Spike™ software. This completely re-engineered licensed software feature implements enhancements to all of Spike's mapping capabilities and gives users much broader insight into wireless infrastructure and the reliability of connectivity for end users. This most recent update includes optimizations for public safety, mobile surveying and network testing uses.

"Signal Hound is putting a significant step forward with these upgraded mapping features in Spike," said AJ Montgomery, Senior Software Engineer. "The wireless spectrum can be a very cluttered space. Critical use frequencies are just one area of focus where having a clear picture of potential issues is essential. This new mapping tool kit license gives engineers and technicians access to survey data that can ensure that interference is mitigated and spectrum access won't be impeded."

Customer feedback and needs in the market factored heavily into the development required for this upgrade. This latest update in Spike follows an innovative shift for Signal Hound in recent years. The company has added licensed features to its phase noise, wireless measurement and now mapping capabilities; improving the value of the software suite as a whole. Spike users can still find free powerful analysis tools for industry standard measurements within the platform. Licensed options now give enterprise-grade capabilities to engineers and technicians with advanced needs or use cases.

### *Spike Advanced Mapping Tool Kit Features:*

- Unlimited simultaneous measurements
- Grid testing
- Report generation
- Heat mapping
- Enhanced rendering efficiency
- Map scaling user interface upgrade
- 10,000+ point limit
- *Optimized for public safety, outdoor surveying and network testing*

Spike's Advanced Mapping Tool Kit upgrade is available via download for \$500 USD annually or a perpetual license for a one-time purchase of \$2,000.
